#### Hygiene

The high quality of the standard finish enables very easy maintenance while avoiding contamination. The hygienic feet made from 316L stainless-steel, adjustable between 140 mm and 200 mm height, make it easier to clean under the enclosures.

#### Resistance to corrosion

High resistance to corrosion. 304L and 316L stainless-steels provide the best solutions for applications in extremely demanding environments.

#### Compatibility with the other ranges

- Stainless-steel accessories:
  - plinths, locks.
- Accessories of the steel control desks offer:
  - mounting plate, pneumatic opening stay, etc.

#### Convenient

The desk lid and the console are equipped with pneumatic opening stays (opening to 75°) allowing complete access to the inside and preventing sudden falls of the console or the hinged cover. Equipped with adjustment rails for adjusting the depth of the mounting plate. Removable rear panel.

### ★ Examples of associations

#### Consoles and control desks

Multiple combinations available.

This range can be configured according to your needs

# Human-Machine Interface Characteristics

**SD**

**SDX**

**Compact control desk with rear panel**

| Sheet steel                                                                                                                                                                                         | Stainless-steel sheet                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Removable rear panel. It enables the installation of two racks back-to-back, allowing the installation of a large number of devices, while ensuring full accessibility from the front and the rear. |                                                                                                                                                                        |
| At the top, these control desks are equipped with cable-entry cut-outs, that allows the installation of one or more modular consoles.                                                               |                                                                                                                                                                        |
| Easy removable and reversible door, opening to 120°. Locking by 3-mm doublebar lock (other inserts or cylinders also available, to be ordered separately, see page 428).                            |                                                                                                                                                                        |
| Desk lid equipped with a pneumatic opening stay. Opens to 75°. Perforated reinforcement rails with a pitch of 25 mm.                                                                                |                                                                                                                                                                        |
| Top cable-entry cut-outs covered by a entire blanking cover.                                                                                                                                        |                                                                                                                                                                        |
| Control desk equipped with adjustment rails with a pitch of 25 mm and brackets allowing adjustment of the mounting plate depth.                                                                     |                                                                                                                                                                        |
| Cable-gland plate with 2 adjustable parts, with polyurethane gasket.                                                                                                                                |                                                                                                                                                                        |
| M8 x 18-mm earthing screw for equipotential connection between the door and the body.                                                                                                               |                                                                                                                                                                        |
| Welded folded sheet steel                                                                                                                                                                           | 304L stainless-steel sheet                                                                                                                                             |
| Structured finish, epoxy-polyester powder paint                                                                                                                                                     | Scotch-Brite® brushed finish                                                                                                                                           |
| RAL 7035 grey                                                                                                                                                                                       | -                                                                                                                                                                      |

## Locking system

PB501217-38

### Pivoting handle

To be installed on the rear door of Control desk with console, replacing the flat escutcheon supplied as standard.  
Ergonomic locking system with pivoting handle (delivered without insert).  
Broad range of inserts for covering the greatest variety of needs (shape inserts, DIN cylinders, KABA, ASSA).  
Changing the opening direction to right / left thanks to the symmetric design of the lock unit (no linkages to be removed).  
Lock unit supported by 2 screws.  
PA 6 charged with 30 % fibreglass  
RAL 7011 grey  
IK10  
650°C

➤ The **Spacial SF PC rack** is designed to protect and control computer equipment in an industrial environments.

PB500901-54

### Steel PC racks

PB500684-28

#### Convenience

- Anti-glare glazed door designed for viewing until 25,5" screens.
- Cable entry made easier by a cable-land plate in 2 pieces.

PB500685-28

#### Ergonomics

- Access to the various functions and working heights, guaranteeing optimum comfort.
- Partial doors delimit the access to each function with a 3 mm double-bar lock.
- Built-in screen and CPU support.
- Built-in keyboard and mouse support.

PB500490-35

#### Robust

- Spacial SF structure formed from a single 1.5 mm galvanised-steel section, with a high moment of inertia.
- Vertical uprights joined with top and bottom frames, screwed together with connections of sintered steel.
- Panels built into the structure.

PB500495-21

#### Simple

The Spacial SF design allows enclosures to be coupled in any direction, adapting to all installation surfaces.

PB500667-35

#### Locking system

Locking system with flat escutcheon, made from polyamide 6 with 30 % fibreglass, RAL 9005 black, with 5 mm double-bar insert for the plain rear door, and small flat escutcheon with 3 mm double-bar insert for the partial front doors.

Detail of 5 mm DB lock on rear door.

This range can be configured according to your needs

4 different services available:

Assemble to order

Mounting of standard accessories

> The **stainless-steel monobloc PC racks** have been especially designed to protect computer equipment installed in corrosive or specially environments that require washing or exposure to sprays of liquid.

### Stainless-steel monobloc PC racks

PB501223-69

#### Convenience

- Anti-glare glazed door designed for viewing 14" and 17" screens by removing part of the silkscreen printing.
- Cable entry made easier by a cable-gland plate (at the rear) in 2 pieces.

PB501223-108

#### Sealing

- IP55, even with the keyboard drawer open, thanks to the pivoting Plexiglas shutter.

PB501223

#### Optional accessories

- Shelf mounted on telescopic rails.

PB501266-32

#### Ergonomic

- Partial doors delimit the access to each function with a 3-mm double-bar lock.
- Access to the various functions and working heights, guaranteeing optimum comfort.
- Built-in screen and CPU support.
- Built-in mouse support.

PB501223-107

#### Hygiene

- The high quality of the standard finish enables very easy maintenance while avoiding contamination.
  - The hygienic feet made from 316L stainless-steel, adjustable between 140 mm and 200 mm height, make it easier to clean under the enclosures, ref. **NSYPHX200**.
- More information on page 139 and 294.

PB501233-32

#### Resistance to corrosion

- High resistance to corrosion. 304L and 316L stainless-steels provide the best solutions for applications in extremely demanding environments.

This range can be configured according to your needs

4 different services available:

Assemble to order

Mounting of standard accessories

Painting

Machining

# Variable speed drive flush-mounting kits

## Introduction

**New**

> The variable speed drive flush-mounting kits have been designed to isolate the power part, which is an important source of heat. They are mounted in the Spacial range of steel enclosures (floor-standing and wall-mounting enclosures) and have been approved for Altivar Process variable speed drives in the ATV630 and ATV930 ranges (power range: 0.75 to 45 kW at 200/240 V, 0.75 to 90 kW at 380/480 V).

> The kits are available in five sizes and offer two methods of mounting variable speed drives:

- slide-rail mounting for sizes 1, 2 and 3
- bracket mounting for sizes 4 and 5.

> The kits can be installed:

- at the back of the enclosure. This installation provides full thermal insulation

**Tightness**  
IP55 to IEC 60529 with polyurethane seal provided.

**Ease of installation**  
Set of slide-rails allowing the variable speed drive to be mounted quickly and efficiently.

**Strength**  
The rigidity of the kit allows it to be installed on Spacial S3D, SF and SM enclosures.

**Earth continuity**  
Earth continuity is ensured by tightening the M6 nuts associated with pin washers.

**Maintenance of the variable speed drive fan (kit sizes 4 and 5)**  
Easy front-panel maintenance for fan servicing.

**Configured offer**

**Services**  
Possibility of cutouts (enclosure and frame) by Schneider Electric: no risk of corrosion and cuts (cutout made before painting).

- inside the enclosure on a mounting plate. This installation may require the addition of a thermal control.

# Variable speed drive flush-mounting kits

## Characteristics

New

Sizes 1, 2 and 3.

Sizes 4 and 5.

| Characteristics              | Mounting kits                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

➤ The compartmentalised enclosure separates the various working areas, restricting their access.

**The closed compartments make it possible**

- To insulate the control of a device mechanically and electrically.
- To reduce the destructive effects of a short-circuit.

Equipment support accessories, see page 444.

**This range can be configured according to your needs**

\* Delivered with 1 metal key.

## Fixed panel for modularity

## Partial doors

### Plain

Heights from 400 to 1000 mm.

### Transparent

Heights from 400 to 1000 mm.

### For folding panel

## Intermediate crossbar

Height 200 mm.

Height 200 mm.

## Folding panels

## Control desk

## Side partitions

## Rear partitions

## Mounting plate

- The door of the "incoming" enclosure is interlocked by the control of the main switch or circuit breaker. A built-in interlocking system with runner rods prevents the opening of the "outgoing" enclosure doors. Access is only allowed when the main switch or circuit breaker is in "O" position and the main door is open. Manual activation of the rods unlocks the other doors and allows access.
- Designed to be associated with certain circuit breakers or switches:
  - Square D (9422 A1).
  - Schneider Electric.
- The system is limited for configurations up to 4 columns.

### Secure

The built-in secure interlocking system for the door (on demand) of the "incoming"/"outgoing" enclosures allows Spacial SF enclosures to be adapted to the requirements of the American car industry.

# Automobile application

PB500745-22

The fixed panel in this example must be ordered through our customised service.

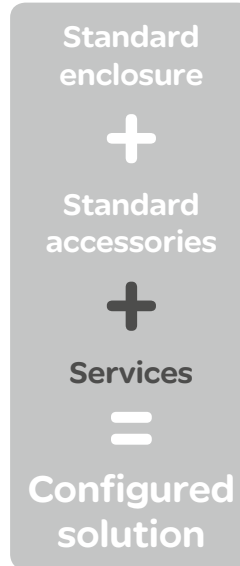

# The customised solutions

## Configured offer

## Introduction

Configured

The **configured offer** is a standard offer enriched by **4 services**

### Assemble to order

- Change the cladding composition (panels, doors...)
- Merge and assemble several enclosures (only for Spacial SF and Thalassa PLA)
- + Enclosure composition stick 100 % to customer needs
- + No need to have qualified personnel to merge enclosures

### Painting

- Change the colour of the complete enclosure (choice of 36 colours)
- Modify the coating of the raw material (ex.: zinc, etc.)
- + Industrial painting ensures the best protection
- + Totally customized

### Machining

- Make square and circle cut-outs **before** painting the enclosure (body, cable gland plate, sides) and mounting plates
- + Ensures safety and the best protection against rust
- + The enclosure is ready to be equipped

### Mounting of standard accessories

- Pre-installation of accessories inside or out-side of the enclosure (ex.: mounting plate, plinth, canopy, etc.)
- + Enclosure ready to be equipped

*Minimum order: 1 to 5, depends on type of enclosure.  
Manufacturing time: 3 to 10 days, depends on offer type.  
Delivery time: varies with destination, please consult us for more information.*

# Spacial.conf configuration tool

**Spacial.conf** is the configuration tool to be used to place your order. It gives you several benefits:

## > Consistency & error free

- One configurator for 14 countries & all configurable offers
- Compatibility between enclosure & accessories

## > Time saving & flexibility

- Users can indicate machining requests directly on our DXF drawing
- Decreasing price (depends on quantity)
- Manufacturing time adapted to each offer

## > Autonomy & facility

- Availability of both on-line & off-line versions
- Illustrated products help you in your choice
- FAQ information for faster understanding

## > Information back-up

- All data are provided to registered users (quotation, technical datasheet, etc.)
- Reusable smart code

## Your order in 5 steps with Spacial.conf:

### 1 - Select country & language

- 14 countries
- 4 languages

### 2 - Select enclosure

- Select product range
- Select material
- Select enclosure type

### 3 - Select accessories

- Composition accessories
- Mounting accessories
- Thermal accessories

### 4 - Select services

- Mounting
- Machining
- Painting
- Assembly

### 5 - Validation & send offer

- Order summary
- Send order to get quotation confirmation from local sales representative

Have a smartphone or a tablet? Scan this >

# The customised solutions

## Specific offer

## Introduction

Specific

# 20

experts

specialized on  
different materials  
and different  
products

The **specific offer** allows you to have a tailor-made product

- > Special dimensions, special needs for thermal system, special components adaptation, etc. All possibilities are open.
- > You can choose to modify any of our standard products (boxes or enclosures, wall-mounting or floor-standing) or start from a newly designed solution.
- > Co-engineer your solution with our design and engineering team (20 experts entirely dedicated to your specific needs).

### Examples of Specific solution

- Special dimension
- Cut-outs on the body and the doors

- Cable-entry & door adaptation
- Special door shape

## What to take into account

This page will help you define your needs for enclosure and streamline your design process. You will then need to contact your sales representative.

### Step 1

#### Environment in which you'll install the enclosure(s)

- > Airborne debris; temperature variations; UV rays?
  - > Indoor or outdoor use?
  - > In wash down environment?
  - > In high traffic environment?
- 

### Step 2

#### Application(s) needs of your enclosure(s)

- > Access control; building automation; motor & motion control?
  - > Need to protect against electromagnetic disturbances?
  - > Use in potentially explosive atmospheres?
- 

### Step 3

#### Enclosure(s) description

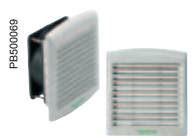

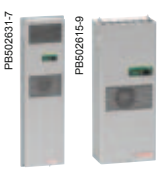

- > Type of enclosure's installation?
  - > Total weight of equipments in the enclosure?
  - > Design: color / coating / finish / dimension?
  - > Body components' adaptations: cable entry / mounting plate?
  - > Thermal management adaptations?
  - > Other accessories adaptations?
  - > Additional information: labeling / packaging / logistic?
- 

### Step 4

#### Business profile

- > Total quantity of enclosures needed and quantity per batch?
  - > Frequency of your order: single order / repeat order?
  - > Delivery time and method demand?
  - > Stock needs?
  - > Other comments?
-

### What is thermal control?

#### Technological evolution

The miniaturisation of components, the generalisation of electronics and the appearance of new electronically powered products have made temperature management into a growing need which must necessarily be considered when designing electrical and/or electronic switchboards.

#### What are the advantages of efficient thermal management?

Thermal management of electrical switchboards is a major factor for industrial maintenance.

Many risks are incurred by not having a suitable thermal solution, which can affect the service life of the components and the performance of the facilities to the extent of causing a halt in production.

The service life of the components also depends on the temperature and humidity conditions inside the enclosure. The ideal values range from +25 to +35°C for the temperature and 40 to 60 % for the relative humidity (RH).

#### Cooling, heating, controlling

For the same reasons as the IP/IK protection ratings, equipment installed in enclosures requires suitable thermal protection.

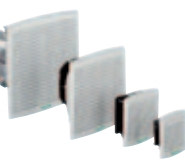

Various solutions to these problems have been put forward. They will be chosen according to environmental conditions, the type of components in the electrical switchboard, etc.

In certain cases, it is sufficient to oversize the enclosure, use fans or air-air exchangers, etc. In other cases, where the ambient temperature is higher, it becomes necessary to install air-water exchangers or cooling units.

#### A solution for each need

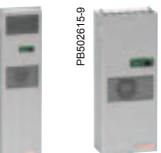

We provide a complete Thermal offer to secure your installations.

### Cooling

- 

> **Forced ventilation systems**
- 

> **Air-air exchangers**
- 

> **Air-water exchangers**
- 

> **Cooling units**

### Heating

> **Resistance heaters**

### Controlling

> **Thermal control accessories**

### Thermal software

> **Thermal software**

### Risks associated with the lack of thermal control

#### Random breakdowns and production halts result in heavy losses

Thermal control of enclosures extends the service life of the components and reduces their breakdown rate.

#### Reduction of the service life of the components

The service life of the components is considerably reduced if the temperature and humidity in enclosures are not controlled. Repeated sudden variations speed up the aging process.

#### Example

##### Batteries – Accumulators

Manufacturers recommend installing batteries in environments where the controlled temperature is 15°C... 25°C. Cold slows down the battery charging and discharging cycles. Heat increases the evaporation of water in the electrolyte and speeds up the oxidation of the plates. Using batteries at temperatures above the recommended value therefore reduces their service life.

#### Sudden production halt

The appearance of hot spots increases the breakdown rate and endangers the production process.

#### Example

##### Electronic equipment

Most electronic industrial control systems are equipped with axial fans for their own thermal control. A failure of the fan can lead to a production halt.

Reduced service life of the fan is one consequence of the enclosure heating up. 24 V DC axial fan.

- Temperature range: -20... +70°C.
- Service life at 20°C (L10 at 20°C): 50000 h.
- Service life at 60°C (L10 at 20°C): 20000 h.

The service life of the equipment can drop from 50000 h to only 20000 h.

#### The internal temperature increases with a high degree of IP

In aggressive atmospheres: dust, humidity, chemical agents, high temperatures, etc., the equipment is installed in industrial enclosures (IP54) in order to protect it from the external environment. Nevertheless, it causes a reheating phenomenon which, if left unchecked, will be responsible in the short term for a halt in the operation of the components.

#### Example

##### Variable speed drives

A variable speed drive controlling a 45 kW (60 HP) motor is programmed to work at temperatures ranging up to 50°C or 60°C.

The power dissipated by this variable speed drive inside the enclosure can reach 1360 W. This contribution of heat inside the enclosure will cause the top temperature to rise to 60°C and probably cause a halt in production.

#### Our solution

Our new thermal offer includes a large range of solutions, suitable for all situations, from installing a ventilation system to exchangers or even a cooling unit. Do not hesitate to contact us to find out the best thermal solution for your installation.

# Thermal management system Overview

| System                                                     | Airing                                                                                                                                                                            | Ventilating                                                                                                                                                                                                                                                     | Air-air exchanger                                                                                                                                                                                                                                                              |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                            | Natural convection causes the temperature to drop inside the enclosure. Simple solutions for this case include installing grilles (without filter) or lifting the top.            | Fans with filters are designed to evacuate a large amount of heat economically.                                                                                                                                                                                 | Air-air exchangers are equipped with an aluminium exchange cassette which separates the internal and external air circuits and prevents the entry of dust.                                                                                                                     |
| When should it be used?                                    | This solution can only be used when the power to be dissipated is low, in an environment with small amounts of dust.                                                              | When larger amounts of heat need to be evacuated in a polluted environment.                                                                                                                                                                                     | The air-air exchangers are used in highly polluted environments or when it is necessary to evacuate large amounts of heat while guaranteeing the independence of the internal and external air circuits. It is important to have a difference of temperature of at least 10°C. |
| Ta: Ambient temperature<br>Td: Desired temperature         | <br><b>Ta &lt; Td</b>                                                                                                                                                             | <br><b>Ta &lt; Td</b>                                                                                                                                                                                                                                           | <br><b>Ta &lt; Td</b>                                                                                                                                                                                                                                                          |

|  | <p>Air-water exchangers reduce the temperature inside the enclosure by means of a water-cooled exchange cassette. Temperature control inside the enclosure is performed by a thermostat which opens and closes an electro-valve.</p>                                                                                            | <p>Air-conditioning device providing efficient cooling of the enclosure, regardless of the outside air, and prevention against hot spots.</p>                                                                                                 | <p>The resistance heaters prevent the formation of condensation and guarantee the ideal temperature for the correct operation of the electronic components.</p>                                                                                                                                                                                                                                                                                                                                             |
|  | <p>The air-water exchangers are used to evacuate large amounts of heat. They require a cold-water circuit with stable temperature and flow rate. They are specially recommended in difficult, highly polluted environments where there is no external air circuit.</p>                                                          | <p>The cooling units can be used in the harshest environments, where the temperature can reach up to 55°C. These devices control the temperature inside the enclosure and include an alarm function for signalling operational anomalies.</p> | <p>The resistance heaters are used to reheat the electrical switchboard when the ambient temperature is too low or to prevent the formation of condensation.</p>                                                                                                                                                                                                                                                                                                                                            |

**> Large range of fans:**

flow rate efficiency, high protection rating, quick installation and easier maintenance to secure all the applications.

DB50048-41

FB501021-80

### Ventilation Systems

PB501038-22

PB501040-42

#### Easy installation

##### Quick installation

- Safe, reliable fixing with the assisted fixing device and the system of multi-thickness fixing-clips.
- Fixing also possible using screws.
- Easy to invert.
- To operate as extractors, all the motors can be inverted by simply removing four screws.

PB501041-27

#### Easy maintenance

##### Quick filter replacement

Quick, easy and safe replacement of the filter installed in the fan, even during operation.

PB501042-28

#### Quality of the components

##### Selection of the motors

- Improved flow rate and longer service life.
- Large range of input voltages available on all the motors delivered as standard, with alternating 50/60 Hz or direct current.

DB123816-26

#### Ventilation offer

With homologation UL available.

PB501032-38

#### Optimised flow rate: average increase of 50 %

- Maximum use of surface.
- Minimum loss of pressure.

### High protection rating: IP54 as standard

#### 1 - Fixing guide

- To centre the body of the fan on the wall of enclosure.
- To correct machining faults.
- To facilitate the correct operation of the fixing "clips".

#### 2 - Multi-thickness fixing-clips

- To guarantee easy and reliable fixing of the ventilation system.
- With a thickness of 0.8 to 4.5 mm, with no fixings.

#### 3 - Inclined profile of the grille

- To protect the filter against vertical spraying:
  - each slat is protected by the slat above it,
  - the external dimensions remain small.

#### 4 - IP54-55

A patented system allows the evacuation of water absorbed by the filter, in particular during high-pressure spraying.

#### 5 - Hot-fitted sealing gasket

The polyurethane gasket, hot cast, guarantees a long-lasting seal.

#### 6 - Effective system for retaining the filter

The system for holding the synthetic filter in the cavity of the filter holder guarantees a protection rating of IP54, in the most difficult conditions.

# Thermal management system

## Characteristics

| Forced ventilation fan<br>38 m³/h | Forced ventilation fan<br>85 m³/h | Forced ventilation fan<br>165 m³/h | Forced ventilation fan<br>300 m³/h | Forced ventilation fan<br>560-850 m³/h |
|-----------------------------------|-----------------------------------|------------------------------------|------------------------------------|----------------------------------------|
|-----------------------------------|-----------------------------------|------------------------------------|------------------------------------|----------------------------------------|

The fans comprise an axial motor, a protective housing on the front and rear surfaces and a filter designed to retain dust particles. This filter can be replaced during operation without risk of contact with the rotating element.

Injected thermoplastic (ASA PC), self-extinguishing according to UL 94 V-0

RAL 7035 as standard, with the option of RAL 7032

- The outside temperature (Te) must be 5°C lower than the desired temperature (Ts) inside the enclosure
- The filters that equip the fans must be cleaned and replaced regularly
- The surrounding environment must be relatively clean and overfrequent filter replacement should be avoided
- Bear in mind the pressure losses caused by the outlet element (grille with filter, ventilation louvre or simple opening) when determining the fan flow rate
- Storage Temperature: -40...+ 70°C

IP54

The cut-out template supplied with the device avoids the need for marking and protects the surface of the enclosure during handling

The device can be equipped with a filter that provides even more efficient protection for your sensitive facilities against dust particles

\* The impact on the flow rates of the fans with different voltages is similar to the impact of the 230 V fans.

### EMC IP54 outlet grille

- Grille equipped with:
- a steel frame covering the plastic elements (self-extinguishing ABS according to standard UL 94 V-0),
  - a metal grille attached to the frame,
  - a beryllium gasket guaranteeing conductivity between the perimeter of the grille and the enclosure.

## Fans by components

### Fans

Free flow without filter or grille: 170 m<sup>3</sup>/h.

Two models according to the input voltage: 230 and 115 V, 50-60 Hz.

- **Ingress protection rating:** IP20.
- **Options:** IP20 outlet grille (ABS, black) and filter (black polyurethane foam).

| Voltage (V) | Flow rate (m <sup>3</sup> /h) | References     |
|-------------|-------------------------------|----------------|
| 115         | 65                            | NSYCVF65M115PF |
| 230         | 65                            | NSYCVF65M230PF |

| Accessories       |               |             |
|-------------------|---------------|-------------|
| Dimensions (mm)   | Description   | References  |
| 124 x 124 x 11 mm | Outlet grille | NSYCAF108LP |
| -                 | Filter        | NSYCAF108   |

### Ventilation kit

- **Ingress protection rating:** IP33.
- **Mechanical protection rating:** IK10.
- **Overall flow rate:** 54 m<sup>3</sup>/h.
- **Supply:**
  - one 120 x 120 x 38 mm fan, 230 V - 50/60 Hz, free flow rate 170 m<sup>3</sup>/h, IP33/IK10,
  - two 120 x 120 mm metal louvres, RAL 7035,
  - two 115 x 98 mm anti-insect grilles, stainless-steel 304L wire Ø 0.32 mm braided, 1.07-mm meshes,
  - a power cord,
  - the fixings required for installation.

| Voltage (V) | Flow rate (m <sup>3</sup> /h) | Reference       |
|-------------|-------------------------------|-----------------|
| 230         | 54                            | NSYCVF54M230MM2 |

### Top hood with fan

Fan with hood, for floor-standing enclosures. A flow rate of 350 m<sup>3</sup>/h is obtained with an outlet grille ref. **NSYCVF575M230MF** / **NSYCVF570M115MF**.

- **Ingress protection rating:** IP54
- **Installation:** installation and removal from the outside.
- **Electric power:** 85 W.
- **Noise level:** 64 dB (A).
- **Supply:** delivered with fixings and connection terminal block.

| Voltage (V) | Flow rate* (m <sup>3</sup> /h) | Weight (kg) | References      |
|-------------|--------------------------------|-------------|-----------------|
| 115         | 570                            | 5.8         | NSYCVF570M115MF |

PB501065-56

### Fan connection cable

For coupling to the connection terminal of the fan motors.

#### Reference

**NSYCVAC100**

### Circulating for internal forced convection

PB501067-63

#### Characteristics

#### Circulation fan

User protection according to DIN 31001.

Dimensions:

- Fan: 119 x 119 x 38 mm.
- Collar: length: 140 mm; fixing centre-to-centre distance: 130 mm.
- Installation on ball-bearing.

Supply

| Flow rate (m³/h) | Voltage (V)    | No. | Weight (kg) | P (W) | I (mA) | dB (A) | Depth (mm) |

\* Warning: the fan **NSYCVF38M230PF** & **NSYCVF38M115PF** MUST NOT be connected to a power conversion module, an inverter or UPS type of power supply!

**New**

> Choose **air-air exchangers** to take advantage of cooler ambient temperatures, such as food and beverage plants, to evacuate large amounts of heat while guaranteeing the independence of the internal and external air circuits.

### A new range of energy efficient exchangers

#### Higher efficiency through improved design

With an updated external grill design, and by positioning cooling closer to critical equipment, such as speed drives, ClimaSys now provides **better flow, better cooling, and higher energy efficiency.**

#### Simplicity saves you time

Our free ProClima thermal calculation software **makes specification simple and fast.** A new thermal solutions module integrates calculation for cooling and control devices, helping you maximize the energy efficiency of your systems.

#### Faster installation

A number of design improvements reduce installation time. Mounting requires single cutouts and a minimum of screws. Wiring is accomplished with smart interconnects.

#### Protection

All side-mounted models are IP55 internally according to EN 60529.

New

### Air-air exchangers

### Air-air exchangers

#### Side-mounting models

##### NSYCEA14E

##### NSYCEA36 / NSYCEA50

##### NSYCEA80

Units of measurement are mm.

**New**

> Choose **air-water exchangers** for especially difficult environments where there is no external air circuit available but a stable cold-water circuit can be supplied.

### Exchangers that tackle highly polluted environments

PB502606-30

#### Many mounting options give you the right fit

Air-water exchangers offer roof and side mounting options.

#### Extended ratings to meet any challenge

Provide options for up to 15 kW of cooling power, among the world's highest power ratings for air-water exchangers.

PB502655-32

#### New material options adapt to any application

Air-water exchangers can be provided in the same material as electrical enclosures for (for example stainless steel) a homogeneous appearance and thermal performance.

DE123916-26

#### New certifications and declarations

- UL,
- CE.

PB502607-13

#### Protection

All side-mounting models are IP55 type protected internally and externally according EN 60529. Top-mounting models are IP54.

New

➤ Choose **cooling units** for harsh environments, where ambient temperatures can reach up to 55°C. The unit's integrated alarm system will signal you in the event of any operational anomaly.

### Cooling units for extremely hot environments

#### Many mounting options give you the right fit

Cooling units range offer roof and side mounting options as well as slim models for efficient and space-saving installation on control panel doors.

#### Extended ratings to meet any challenge

Provide options for up to 15 kW of cooling power.

#### Protection through improved design

A new internal grill design protects components and personnel during operation, while also making ClimaSys products **easier to clean and maintain**.

#### Fast access to settings and status

A new HMI screen enables quick viewing to all configuration parameters and sensor readings within the enclosures (not on outdoor Heavy Duty models).

#### New material options adapt to any application

ClimaSys cooling units offer new outdoor and stainless steel versions, ideal for clean, hygienic environments such as food and beverage plants.

#### Accurate thermal control

To keep motor drives and controls running within safe thermal boundaries, all ClimaSys cooling units offer a precise **electronic thermostat control**. This ensures high cooling precision (+/- 1.5°C).

#### Extended ratings to meet any challenge

ClimaSys CU outdoor Heavy Duty version can withstand extreme environments, with **operating temperature** ratings from -20° to +55°C.

#### New certifications and declarations

- UL,
- CE.

#### Simplicity

No tools needed to replace the filter. It just takes a few seconds.

**New**

\*\*\* To mount on roof of Spacial SF, it is mandatory to order the roof fixing support (see table below).

### Roof fixing support

To install heavy top-mounting models on Spacial SF (cooling units with weight > 65 kg).

- Material: steel.
- Colour: RAL 7035.
- Supply: 2 units.

➤ Ultra thin resistance heaters have been designed to resolve condensation problems in the most complex installations. Is your enclosure short of space? Does your mounting plate make it impossible to install a conventional resistor? Do you not want to take out the equipment? Discover the benefits of this new offer and its numerous mounting solutions.

PF502042-40

PF502437-32

### Minimum thickness

They are extremely slim: 1.6 mm. As a result the usable space in the cabinet has been optimised for installing equipment. This can increase the usable space by up to 30 %!

### Heat and safety

The heat is distributed over the whole surface and does not exceed 70°C. This temperature allows devices next to the heater to be handled safely.

PF502046-22

### Multiple options for fixing

Innovative quick-fixing system using Velcro pads (no need for a tool!) or with basic fixing accessories (screw + spacer). These systems make it easy to move the heater if necessary.

PF502522-16

### Numerous positions for installation

These heaters are so slim and flexible they can be installed in a variety of positions:

- Vertically on side panels
- On the mounting plate.

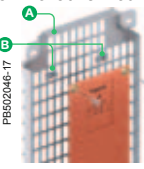

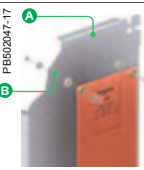

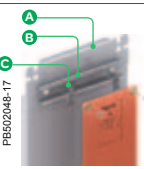

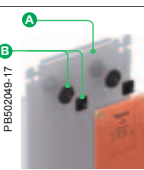

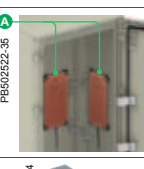

### Low starting current: Energy Efficiency

Ultra thin resistance heaters are ohmic: they therefore have a low starting current.

### No interference emissions

These resistors can be installed near electronic equipment to guarantee optimum heat without the risk of electromagnetic interference.

| Ultra thin resistance heaters |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

\* Ultra thin resistance heaters can be manufactured with different dimensions and power ratings than those indicated above. Please contact us.

➤ The resistance heaters prevent the formation of condensation and guarantee the ideal temperature for the correct operation of the electronic components in the enclosure.

### Insulated PTC heaters

**Large range of power levels**

- 2 versions: by natural convection and with fan.
- AC or DC power supply.
- 7 power levels, from 10 W to 550 W.

**Innovating design**

Covered with plastic to prevent direct contact with the aluminium radiator.

**Easy installation and connection**

- Reduced dimensions.
- Quick electric connection by terminal board.
- No maintenance required.
- Direct clipping onto a 35 mm DIN rail.

**Safety**

- The protection prevents direct contact with the aluminium radiator.
- Electric protection device with terminal block cover.
- Equipped with a PTC-type heater.
- Surface temperature lower than 70°C.

**High thermal efficiency**

- The configuration of the aluminium profile produces a "chimney" effect: high natural convection.
- Low power consumption thanks to self-control of the PTC-type heater.

**Models with fan**

- The heaters equipped with a fan ensure circulation of the air and a uniform temperature inside the enclosure.
- High-flow, silent fan.

**Certifications**

- CE marking.
- Range compliant with UL and VDE.

### Aluminium PTC heaters

#### Resistance heaters equipped with a PTC-type sensor

The resistance heaters for electrical and electronic enclosures are equipped with PTC-type heating devices (Positive Temperature Coefficient).

Thanks to these heaters:

- The surface temperature stabilises at 75°C when the ambient temperature is -5°C.
- Power consumption is reduced.

#### Improved convection

The design of the profile of the resistance heaters produces a "chimney" effect, leading to increased natural convection and maintaining an even temperature inside the enclosure.

#### Quick fixing

The resistance heaters are fixed by means of fixing clips to a 35 mm DIN rail.

#### Connection cables

The 10 and 20 W heaters are equipped with a 2 x 0.75 x 300 mm power cord.

#### Connection terminal boards

Heaters with a power of more than 20 W are equipped with a connection terminal board.

#### Large range of power levels

8 power levels, from 10 W to 400 W.

#### Models with fan

Models of 250 to 400 W with fan.

### Thermal control

#### > Mechanical thermostats

#### Mechanical and electronic thermostats

- Large range of temperature control.
- Small dimensions.
- Easily accessible terminals.

#### > Electronic thermostats

**New**

**LED screen**  
Screen visible even in the dark.

**New**

**New operational temperature range**  
-40°C ... +80°C.

### Mechanical and electronic thermostats

#### The new quick-fixing systems

- On 35 mm DIN rail.

- On Spacial upright.

- On cross-rail.

- On mounting plate.

#### Certifications and declarations

- UL,
- CE.

|  | <b>NSY11961</b>                                                                                           | -                                                                        | -                                                                                                                             | -                                                                                                                                                                                                                                                                    | -                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|  | <b>NSY11962</b>                                                                                           | -                                                                        | -                                                                                                                             | -                                                                                                                                                                                                                                                                    | -                                                                                                                                                                                                                                                                                                                                                                                                                                        |

PE801177

### Thermal control

#### Enclosures Monitor

- The enclosure monitor checks and protects all the equipment in the distribution, network and server racks as well as their environment.
- Ambient parameters and operating states can be measured using various sensors and several inputs.
- Signalling and display: on the unit, serial interface, Ethernet network.
- Digital inputs and switching outputs enable permanent monitoring and adapted actions.

#### Reference

**NSY11950**

Possibilities for connection to the enclosure monitor:

- 4 sensors ref. **NSY11951**, **NSY11952** and/or **NSY11953**.
- 4 sensors ref. **NSY11954** or **NSY11956**.
- 8 insulated digital inputs (free potential).
- 2 digital inputs.
- 1 series input used for monitoring devices with a communication protocol.

#### Connections and cabling diagram

- 1 Contact pin circuit breaker.
- 2 Connection to the network.
- 3 Connection of phase surveillance.
- 4 Digital switching outputs.
- 5 Digital inputs (ref. **NSY11955** and **NSY11958**).
- 6 Alarm inputs (ref. **NSY11954** and **NSY11956**).
- 7 Connection of a sensor, references **NSY11951**, **NSY11952** and **NSY11953**.
- 8 Connection of uninterruptible power supply.
- 9 Connection to Ethernet network RJ45.
- 10 Series interface for external devices.
- 11 Series interface for connection to a terminal.

PE801178

#### Door contact

Monitors door access by means of a magnetic sensor that reacts to any material conducting magnetic flow.

- **Length of cable supplied:** 4 m.
- **Maximum cable length:** 20 m.
- **Supply:** with fixings.

#### Reference

**NSY11955**

The miniaturisation of components, the generalisation of electronics and the appearance of new electronically powered products have made temperature management into a need which must necessarily be considered when designing electrical and/or electronic switchboards, in the same way as the protection rating. Reliability and the search for lower breakdown rates are two determining factors in process industries, where the cost per hour is extremely high. The smallest failure can instantly result in considerable losses. The service life of the components also depends on the temperature and humidity conditions inside the enclosure. The ideal values are +25...+35°C for the temperature and 60 % for the relative humidity (RH).

Various solutions to these problems have been put forward. They will be chosen according to environmental conditions, the type of components in the electrical switchboard, and their cost.

In certain cases, all it takes it to oversize the enclosures or use fans. In other cases, when the temperature is higher, it becomes necessary to install air-water exchangers or air coolers operating according to the principle of refrigeration (cooling units). We offer you a range of solutions that adapt to every possible scenario: from the enclosure itself to ventilation systems, resistances or exchangers, and even cooling units.

### Natural dissipation

#### Through the walls of the enclosure

The use of a larger enclosure can, in certain cases, solve your heating problem.

### Airing

#### Natural ventilation

The addition of fresh air from the outside through ventilation louvres improves the dissipation of heat by natural convection. However, this solution can only be used to dissipate small power levels and in environments with a small amount of dust.

### Ventilating

#### Circulation

Air circulation inside the enclosure with the help of a fan makes it possible to guarantee an even temperature, avoiding hot spots that can damage certain components.

#### Forced ventilation

The fans are designed to evacuate a considerable amount of heat coming from the components of the electrical switchboards. The service life of the latter is considerably extended, thus guaranteeing the long life and correct operation of the installation.

The fans can only be used if the ambient temperature is at least 5°C lower than the desired temperature inside the enclosure.

They offer an efficient solution, one that is easy to implement and maintain, which is also inexpensive, to the problem of temperature increases in the electrical switchboards. Thanks to their standard IP54 (IP55 with accessories) they are suitable for use in industrial and tertiary sectors.

### Heating

#### Resistance heaters

Resistance heaters can be used for two reasons:

- To reheat the electrical switchboard when the ambient temperature is too low for the correct operation of the components.
- To prevent the formation of condensation.

The second phenomenon can cause short-circuits, premature oxidation of the contacts, corrosion of metal parts and, in particular, of the enclosure, a considerable reduction in the service life of the electrical and electronic components.

Condensation occurs when the temperature suddenly drops below the dew point temperature. To avoid this, it is simply necessary to maintain the temperature inside the enclosure at a few degrees above the ambient temperature of the environment. Thanks to their design, the heaters encourage natural convection and guarantee quick and even heating within the enclosure.

### Cooling

#### Air-air exchangers

Air-air exchangers are devices that combine efficiency and simplicity. The hot air flows of the enclosure and the cold of the surrounding environment, created by two fans, circulate on either side of hermetic separation walls, preventing the penetration of dust or moisture in the enclosure. The hot air from the switchboard reheats these walls, which in turn are cooled by the fresh air from outside. The transfer always takes place from the hotter side to the cooler side. This is why these devices can only be used if the ambient temperature is at least 5°C lower than the desired temperature inside the enclosure.

The aluminium exchange cassette forms the core of the system. This element can be cleaned easily by simply removing it. In addition, the permanent operation of the internal fan prevents the appearance of hot spots in the electrical switchboard. The temperature regulation system integrated in the unit turns the external circuit fan on and off.

#### Air-water exchangers

Air-water exchangers operate on the same principle as air-air exchangers. Fresh air from the outside is replaced with cold water supplied by a network installed on the industrial site. This change of fluid makes it possible to evacuate much larger amounts of heat and, possibly, to reduce the temperature in the enclosure below the temperature of the ambient air.

Temperature control in the enclosure is carried out by modulating the water flow. The water circuit is protected by a shut-off device: your electrical installation is safe.

#### Cooling units

Cooling units can be used in the harshest environments, where the temperature can reach 55°C. These devices are especially recommended when the desired temperature inside the enclosure must be lower than the ambient temperature or when a large amount of heat needs to be evacuated. As in the case of the exchangers, they do not affect the IP of the switchboard.

The filter, placed at the inlet of the external air circuit, allows it to operate even when the ambient air is charged with dust or oil particles. Easily replaceable and quite inexpensive, this device guarantees the efficiency of the device throughout its service life. These devices control the temperature inside the enclosure and include an alarm function for signalling operational anomalies.

The ambient temperature is higher than the desired temperature inside the enclosure.

The ambient temperature is lower than the desired temperature inside the enclosure.

The ProClima calculation software, available on our website, is an indispensable tool for the selection of a thermal auxiliary.

### Method of determining the thermal solution

The heat balance, which consists of comparing the power released by the devices with the power exchanged spontaneously through the wall of the enclosure, allows us to calculate the internal temperature obtained in the enclosure, with no thermal accessories, and thus to determine whether it is necessary to install any, bearing in mind the desired internal and external temperatures. Below we have presented a simple method for implementing this choice.

#### 1 - Characteristics of the enclosure

| Position of the enclosure | Location according to IEC 890 ratio                                   | Formula for calculating S (m <sup>2</sup> )                      |
|---------------------------|-----------------------------------------------------------------------|------------------------------------------------------------------|
|                           | Accessible from every side                                            | $S = 1.8 \times H \times (W + D) + 1.4 \times W \times D$        |
|                           | Placed against a wall                                                 | $S = 1.4 \times W \times (H + D) + 1.8 \times D \times H$        |
|                           | On the end when suited                                                | $S = 1.4 \times D \times (H + W) + 1.8 \times W \times H$        |
|                           | On the end when suited, placed against a wall                         | $S = 1.4 \times H \times (W + D) + 1.4 \times W \times D$        |
|                           | In the middle when suited                                             | $S = 1.8 \times W \times H + 1.4 \times W \times D + D \times H$ |
|                           | In the middle when suited, placed against a wall                      | $S = 1.4 \times W \times (H + D) + D \times H$                   |
|                           | In the middle when suited, placed against a wall with the top covered | $S = 1.4 \times W \times H + 0.7 \times W \times D + D \times H$ |
|                           |                                                                       | <b>S =</b> <input type="text" value=""/> <b>m<sup>2</sup></b>    |

H = Height - W = Width - D = Depth

**Example**  
 Spatial reference NSYSF20840  
 H = 2000  
 W = 800  
 D = 400  
 Installation method:  
 Suitable enclosure placed against a wall.

**S = 4.43 m<sup>2</sup>**

#### 2 - Thermal power dissipated by the operational components

Calculated as the sum of the power dissipated by each of the installed components. If these are not known, use the ProClima software and page 526, which shows the average values.

**Pd =**  **W**

Assume that the switchgear dissipates 800 W.

**Pd = 800 W**

#### 3 - Characteristics of the environment air

Maximum ambient temperature.  
 Minimum ambient temperature.  
 Average relative humidity.  
 Dew point temperature. Useful to avoid condensation and to calculate resistance heater power.

**Te<sub>max</sub> =**  **°C**  
**Te<sub>min</sub> =**  **°C**  
**RH =**  **%**  
**Dp =**  **°C**

The temperature conditions are as follows:

**Te<sub>max</sub> = 35°C**  
**Te<sub>min</sub> = 15°C**  
**RH = 70 %**  
**Dp = 29°C**

#### 4 - Average desired internal temperatures

They are defined by the nature of the components and the characteristics of the environment air  
 Maximum internal temperature  
 Minimum internal temperature (maximum value between the dew point temperature and the minimum operating temperature of the devices)

**Tid<sub>max</sub> =**  **°C**  
**Tid<sub>min</sub> =**  **°C**

**Tid<sub>max</sub> = 40°C**  
**Tid<sub>min</sub> = 29°C**

#### 5 - Final temperature inside the enclosure with no thermal system

Max. internal temperature:  $T_{fi_{max}} = \frac{Pd}{K \times S} + Te_{max}$   
 Min. internal temperature:  $T_{fi_{min}} = \frac{Pd}{K \times S} + Te_{min}$

**Tfi<sub>max</sub> =**  **°C**  
**Tfi<sub>min</sub> =**  **°C**

**Tfi<sub>max</sub> = 70°C**  
**Tfi<sub>min</sub> = 50°C**

or K = 5.5 W/m<sup>2</sup>/°C for an enclosure made of painted sheet steel  
 K = 3.5 W/m<sup>2</sup>/°C for a polyester enclosure  
 K = 3.7 W/m<sup>2</sup>/°C for a stainless-steel enclosure  
 K = 12 W/m<sup>2</sup>/°C for an aluminium enclosure

### 6 - Determining the type of thermal device and its power: Psyst

- a:**  
 $Tid_{max} < Ti_{max}$   
 $\Delta T_{min} = (Tid_{max} - Te_{max})$   
 ■  $\Delta T_{min} = +5^{\circ}C$ : Ventilation  
 ■  $\Delta T_{min} = +10^{\circ}C$ : Exchanger air-air  
 ■  $\Delta T_{min} = -5^{\circ}C$ : Cooling unit  
 ■ Not depending on  $(\Delta T_{min})$ : Exchanger air-water
- b:**  
 $Tid_{min} > Ti_{min}$ : Heaters

| If $Tid_{min} < Tfl_{min}$                                                               | If $Tid_{min} > Tfl_{min}$                                                                                                                                                                                                                                     | If $Tid_{max} < Tfl_{max}$                                                                                                                                                                                                   | If $Tid_{max} > Tfl_{max}$                                                               |

## ProClima

### New ProClima software

- Software package for calculating and selecting the thermal accessories required for enclosures containing electrical and electronic equipment.
- Performs the calculations as well as the corrected surfaces, according to the dimensions of the enclosure and its position in relation to the walls.
- Available for download on our homepage.

### Data entry

The following steps must be followed to conduct this study:

PB50001-56

PB501164

- 1** - Enter the project and customer data (optional).

PB501165

- 2** - Enter the internal and external temperature data for the enclosure (compulsory).

PB501186

- 3** - Enter the electrical data for the installation (voltage, rating, etc.) (compulsory).

PB501187

- 4** - Determine the power dissipated by the electrical equipment inside the enclosure (compulsory).  
If this value is not known, the software can calculate it:
  - Based on the electrical or electronic switchgear that make up the switchboard (type and number),
  - Based on a temperature reading.

## ProClima

### Results

#### Summary of the heat balance

The software offers to print the project summary containing the calculation values, the results obtained and the thermal accessories recommended for maintaining the internal temperature of the enclosure in the specified conditions. In addition, the summary specifies the power, characteristics and reference of the device, as well as any related accessories.

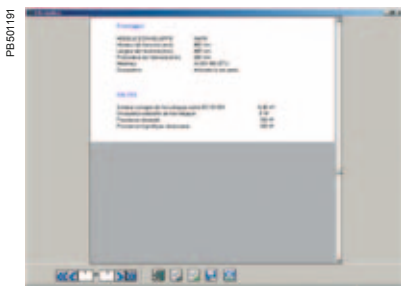

**5** - Select the enclosure and the installation method (compulsory).

**6** - Select the thermal management system (fans, exchangers, etc.) (compulsory).

**7** - View and print the project summary.

(1)  $P_d$  = Thermal power dissipated by the operational components

$S = 1.4 \times W \times (H + D) + 1.8 \times D \times H = 4.6 \text{ m}^2$ .  
According to standard IEC 890

$K$  = Constant defined by the material used to manufacture the enclosure  
 $K = 5.5 \text{ W/m}^2 \times ^\circ\text{C}$  for a solid sheet-steel enclosure  
 $K = 3.5 \text{ W/m}^2 \times ^\circ\text{C}$  for a polyester enclosure  
 $K = 3.7 \text{ W/m}^2 \times ^\circ\text{C}$  for a stainless-steel enclosure

$f$  = Coefficient relating to the height above sea level (value)  
 0 to 100 m:  $f = 3.1$   
 100 to 250 m:  $f = 3.2$   
 250 to 500 m:  $f = 3.3$   
 500 to 750 m:  $f = 3.4$   
 750 to 1000 m:  $f = 3.5$   
 ...

### Data

#### ■ Enclosure data

- Height: 2000 mm
- Width: 800 mm
- Depth: 500 mm

■ **Location:** placed on the wall

■ **Material:** painted sheet-steel enclosure

■ **Thermal power dissipated by the operational components** Pd: 950 W

#### ■ Information on temperature and the environment:

Maximum desired temperature inside the enclosure  $T_{e_{\max}}$ : 25°C

Minimum desired temperature inside the enclosure  $T_{e_{\min}}$ : 25°C

Maximum temperature dissipated in the enclosure  $T_{e_{\max}}$ : 35°C

Minimum temperature dissipated in the enclosure  $T_{e_{\min}}$ : 25°C

■ **Environment:** low pollution and low dust level

### Selection and calculation

The desired maximum temperature inside ( $T_{s_{\max}}$ ) the enclosure is 10°C higher than the maximum value expected for the outside ( $T_{i_{\max}}$ ).

It is possible to cool the enclosure using the filtered ventilation systems.

### Calculation of the required fan (1)

Usage formulas:

$$P_{\text{syst}} = P_d - K \times S \times (T_{s_{\max}} - T_{e_{\max}})$$

$$\text{Flow} = f \times P_{\text{syst}} / (T_{s_{\max}} - T_{e_{\max}})$$

In order to make the calculation, it is necessary to know the height above sea level of the installation location:

Height above sea level: 800 m

### Our example

$$P_{\text{syst}} = 950 - 5.5 \times 4.6 \times (35 - 25) = 697 \text{ W}$$

$$\text{Flow rate} = 3.5 \times 697 / (35 - 25) = 244 \text{ m}^3/\text{h}$$

#### Selection from the fan quick-selection table:

**1 fan with standard filter ref. NSYCVF300M230PF**

**+ 1 grille with standard filter ref. NSYCAG223LPPF**

**+ 1 thermostat ref. NSYCCOTHO enable a flow rate of 302 m<sup>3</sup>/h**

The minimum outside temperature is lower than the desired minimum temperature inside the enclosure.

#### It is necessary to install resistance heaters:

##### Calculation of the useful resistance heater

$$\text{Usage formula: } W = K \times S \times (T_{s_{\min}} - T_{e_{\min}})$$

$$\text{Our example: } W = 5.5 \times 4.6 (15 - 10) = 127 \text{ W}$$

#### Selection from the selection guide of the resistance heaters:

**1 resistance heater ref. NSYCR150WU2C**

**+ 1 thermostat ref. NSYCCOTHC**

### Spacial wall-mounting enclosures

Use ProClima to save time and find the best solution!

**Installation mode**

- 1 Accessible from every side
- 2 Placed against a wall
- 3 On the end when suited
- 4 On the end when suited, placed against a wall
- 5 In the middle when suited
- 6 In the middle when suited, placed against a wall
- 7 In the middle when suited, placed against a wall with the top covered

The surfaces are given in m<sup>2</sup>.

PB60066-57

**Empty enclosures for low-voltage switchgear and controlgear assemblies.  
General rules.**

## Application

For empty enclosures before adding the user's switchgear, in the condition as supplied by the manufacturer.

## Field of application

Demands for testing the enclosures to be used as part of the switchgear assemblies for voltages of less than 1000 V alternating current and 1500 V direct current.

## Information supplied by the manufacturer

- Commercial trademark of the manufacturer: Schneider Electric.
- Mechanical characteristics, materials, conditions for use.
- Conditions for use:
  - Ambient air temperature for outdoor installations: -25 to +40°C.
  - Atmospheric conditions for outdoor installations: the humidity can temporarily reach 100% at a temperature of 25°C.
  - Transport and storage conditions: from -25 to +55°C; for limited periods not exceeding 24 h: up to +70°C.

\* European standard EN 62208 is identical to IEC 62208. European countries publish this standard according to the body in each country (for example BS EN 62208 in the UK).

PB60067-57

## Standard tests of standard IEC 62208

- Static loads: test 1.25 x maximum admissible load during 1 hour.
- Lifting: applicable to enclosures with lifting accessories.
- Axial loads of metal inserts: 500 N for 10 seconds for M8 inserts.
- IK code: test according to standard IEC 62262 with pendulum impact tester. After testing, the enclosure keeps its IP rating.
- IP rating: test according to standard IEC 60529. Degree of protection against access to dangerous parts and the penetration of solid bodies and against the penetration of water.
- Thermal stability at a temperature of 70 °C: 7 days.
- Resistance to heat: ball test at 70 °C (1).
- Resistance to abnormal heat and to fire: glow wire test according to IEC 60695-2-10 and IEC 60695-2-11 (1).
- Dielectric strength: 5000 V (1).
- Protection circuit continuity (2): resistance not to exceed 0.1 ohm.
- Weather resistance: duration 500 h (cycle: rain 5 minutes + UV lamp 25 minutes).
- Corrosion resistance:
  - For indoor enclosures:
    - 6 cycles of 24 hours of the damp heat test at 40 °C and relative humidity of 95%.
    - 2 cycles of 24 hours of the salt mist test at 35 °C.
  - For outdoor enclosures:
    - 12 cycles of 24 hours of the damp heat test at 40 °C and relative humidity of 95%.
    - 14 cycles of 24 hours of the salt mist test at 35 °C.

Our empty enclosures are marked CE according to the Low-Voltage Directive (LVD). It is the responsibility of the final equipment manufacturer to respect regulations in force.

(1) Information required for enclosures made from insulating material.  
(2) For metal enclosures.

## Selection according to the IP protection degrees

The degrees of protection, explained on the next page, is an important element when selecting the enclosures.

The following table shows the protection degrees of the enclosures.

| Name                                                | Range            | IP40 | IP41 | IP42 | IP43 | IP44 | IP54  | IP55  | IP65 | IP66  |

## Selection according to the environment

The location of the enclosures and the physical, chemical and climatic conditions to which they are exposed will determine the model to be used.

- Steel enclosures are particularly well suited to indoor use in industrial environments.
- Stainless-steel enclosures are particularly well suited to corrosive environments or areas where specific hygiene demands are applicable.
- Polyester enclosures are particularly well suited to severe corrosive atmospheres, indoors or outdoors.

Enclosures made from insulating materials guarantee total insulation, reducing electric hazards for persons.

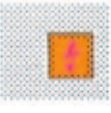

The main characteristics of the plastic materials of our enclosures and their chemical strength are given on page 540.

Further help for making the selection is given by the NEMA or UL classification of the enclosure, see page 537.

# Degrees of protection provided by enclosures

- The degrees of protection provided by the enclosures are defined by standards IEC 60529 (IP) and IEC 62262 (IK).
- Degrees of protection are indicated by the letters IP followed by two characteristic numerals. The numerals show the degree of protection offered by the enclosure against access to dangerous parts, the penetration of solid bodies (1st numeral), and against the penetration of liquids (2nd numeral).
- The protection against external mechanical impact is indicated by the letters IK followed by a characteristic group numeral.

**Note:** Many EN European standards are harmonised with international IEC standards.  
 This is the case with enclosure protection standards:  
 - EN 60529 = IEC 60529.  
 - EN 62262 = IEC 62262.

|                                                                                                                                                                                            | IP                                                                                                                                                                         | IK                                                                                                                                |

# Classification of electrical equipment enclosures according to NEMA and UL

NEMA and UL are standardisation bodies, commonly recognised in North America, which have issued classifications of enclosures according to the protection offered in various environments.

These classifications are similar.

The 1<sup>st</sup> table below summarises this classification, which does not include potentially explosive areas. The detailed recommendations of this classification are given on the next page.

The 2<sup>nd</sup> table indicates the classification of our enclosures.

These classifications appear in our UL certifications (see Certification technical annex on page 532).

Certification according to the UL classification guarantees the corresponding NEMA classification by equivalence.

| Environment and protection                                     | Classification |   |   |    |    |   |    |   |   |    |    |     |    |

(4) In some ranges the classification depends on the model and version. The detailed protection types are indicated in the UL certifications.

# Classification of electrical equipment enclosures according to NEMA and UL

PS600063-55

PS600064-55

The enclosures must protect the equipment against environmental conditions and protect the personnel against the risk of incidental contact with the equipment. The following classifications (Type) are required according to the required uses and prescriptions:

| Type | Use                                      | Prescription                                                                                                                                                                                                                                                                                                                  |
|------|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Indoor use                               | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt.                                                                                                                                                                          |
| 2    | Indoor use                               | It provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, drips and gentle splashes of non-corrosive liquids.                                                                                                                                 |
| 3    | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow, windblown and resists the formation of ice on the outside.                                                                                            |
| 3R   | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow and resists the formation of ice on the outside.                                                                                                       |
| 3S   | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow and windblown dust. The external mechanism must continue to work even when layers of ice are formed.                                                   |
| 4    | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow, windblown dust, splashes and hose-directed water and resists the formation of frost on the outside.                                                   |
| 4x   | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow, windblown dust, splashes, hose-directed water and resists corrosion and the formation of ice on the outside.                                          |
| 5    | Indoor use                               | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, settling airborne dust, lint, fibres, flyings, drips and gentle splashes of non-corrosive liquids.                                                                       |
| 6    | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow, hose-directed water, the entry of water during occasional temporary submersion to a limited depth and resists the formation of ice on the outside.    |
| 6P   | Indoor and outdoor use                   | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, rain, sleet, snow, hose-directed water, the entry of water during prolonged submersion to a limited depth and resists corrosion and the formation of ice on the outside. |
| 12   | Indoor use (without knockouts)           | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, dust, fluff, fibres, particles in suspension, drips and gentle splashes of non-corrosive liquids as well as gentle splashes or leaks of oil and non-corrosive coolants.  |
| 12K  | Indoor use (enclosures with pre-routing) | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, dust, lint, fibres flyings drips and gentle splashes of non-corrosive liquids as well as gentle splashes or leaks of oil and non-corrosive coolants.                     |
| 13   | Indoor use                               | The enclosure provides protection for the personnel against incidental contact with the internal equipment and protects said equipment against dirt, dust, lint, fibres flyings and the spraying, splashing, and seepage leaks of water, oil or non-corrosive coolants.                                                       |

**Note:** The above recommendations aim to explain the NEMA and UL classifications, but are not the official texts of NEMA or UL. The exact definitions provided by the Organisations are those of standards NEMA 250 and UL 50E.

# Polyester base coating properties

P8500088-98

## Product type

Thermosetting polyester resins based powder coating modified by epoxy resins and designed for decoration and to prevent corrosion.

The performance of this coating is superior to conventional epoxy powders in terms of: colour stability, temperature resistance and weather resistance.

Grey RAL 7035; appearance: structured.

## Mechanical properties

Test conditions: steel samples with a thickness of 10/10<sup>e</sup> mm.

Degreasing using biodegradable surface-active agents.

Film thickness: 60 microns.

|                                        |                          |                                                           |
|----------------------------------------|--------------------------|-----------------------------------------------------------|
| Bonding (scratching and adhesive tape) | ISO 2409                 | Class 1                                                   |
| Ericksen stamping                      | ISO 1520                 | ≥ 7 mm                                                    |
| Direct impact resistance               | ISO 6272                 | > 1 kg/70 cm                                              |
| Indirect impact resistance             | ISO 6272                 | > 1 kg/20 cm                                              |
| Bending around conical mandrel         | ISO 6860 - ASTM D 522-88 | Maximum cracking of 70 mm, without the paint coming loose |

## Chemical properties

Tests conducted at ambient temperature on phosphated samples covered with a 150 to 200 micron film:

■ Film intact.

■ Film attacked (blistering, yellowing, loss of gloss).

| Number of months |                         |      | 2          | 4          | 6         | 8         | 10        | 12 |  |  |  |

## Physical properties

Temperature resistance: -40°C and 100 hours at +150°C (colour: white).

Gloss retention: good.

## Resistance to corrosion

Compliance with standard IEC 62208 for outdoor installations: 288 h of humid heat and 336 h of salt mist.

# Polyester base coating properties

## Nuclear decontamination

Applicable to colours RAL 7035 and AFNOR A550.  
Standard NFT 30901. Percentage of decontamination for contamination by fission products. Please consult us for further details.

## Accelerated aging

Standard IEC 62208: 500 h UV according to ISO 4892 (method A) (adherence of the coating with minimum retention of 50% on the grid according to ISO 2409).

## Fire behaviour

Class M1 (self-extinguishing material).  
Class M0 (for coating on a metal base).

## Manufacturing process

# Properties of the plastic materials

## Mechanical, electrical, physical and fire-resistance properties

Plastic materials generally used to manufacture our products:

- ABS.
- Polycarbonate.
- PVC (polyvinyl chloride).
- Bayblend® = PC + ABS.
- Polyester reinforced with fibreglass.
- Altuglas.
- Polypropylene.
- Polystyrene.
- Polyamide 6 and 12.
- SBS.

# Properties of the plastic materials

## Resistance to chemical agents

The table shows:

- The concentration of the chemical agent in %; sat = saturation.
- The resistance of the material:
  - +: Resistant.
  - O: Limited resistance.
  - : Not resistant.

Plastic materials generally used to manufacture our products:

- ABS.
- Polycarbonate.
- PVC (polyvinyl chloride).
- Bayblend® = PC + ABS.
- Polyester.
- Altuglas.
- Polypropylene.
- Polystyrene.
- Polyamide 6 and 12.
- SBS.

| Resistance to        | ABS  | Polycarbonate | PVC   | Bayblend® | Polyester | Altuglas      | Polypropylene | Poly-styrene | Polyamide 6  | Polyamide 12 | SBS   |

# Description of the marking label affixed to ATEX certified wall-mounting enclosures

## Spacial S3XEX

## Thalassa PLMEX

## Spacial S3DEX

- 1 Product range
- 2 0163: No. of the body  
 Ex: ATEX symbol according to the directive  
 II: Surface industries  
 2: Product category  
 GD: Gas and dust
- 3 Ex: Product compliant with EN 60079-7 (gas)  
 e: Increased safety  
 II: Surface industries
- 4 Ex: Product compliant with EN 60079-31 (dust)  
 t: Protection by t enclosure
- 5 Ta: Ambient temperature
- 6 No. of the CE certificate
- 7 IP66: Degree of protection
