# Mounting

## Mounting plates for floor-standing enclosures

### Dimensions

#### Plain mounting plate

### + Advantages

- The Spacial.pro tool helps determine the optimum dimensions of the mounting plate.

- The triple fold of the vertical edges of the mounting plate contributes to increasing the latter's rigidity and increases handling safety by preventing finger cuts.

#### Perforated mounting plate "Telequick"

(1) Cut-outs 11 x 26 with a pitch of 15 x 30.

#### Examples of perforated mounting plate installation

PB500825-19

Perforated plate mounted on structure.

PB500826-23

Perforated plate mounted on technical vertical uprights.

PB500827-23

Perforated plate mounted on standard vertical uprights.

PB500828-22

Perforated plate mounted on cross rails.

#### Partial mounting plate

### Dimensions and fixing

#### Intermediate mounting plate

#### Reinforcement for mounting plate

### Mounting plate accessories

#### Self-tapping screw

PB500808

- Hexagonal head, 4.8 x 16 mm thread. Drilling capacity: thicknesses between 17.5/10° and 40/10° mm.
- **Supply:** 100 units. To be ordered in multiples of 100 (100, 200, 300, etc.).

# Mounting

## Mounting rails for floor-standing enclosures

### Characteristics

#### Side entry rails for the mounting plate

- Side entry device for the mounting plates when coupling **Spacial SF** enclosures or **Spacial SFX**.
- The mounting plates can be coupled with one another, and are fixed to the side entry guide by pressure.

Material  
Supply

Zinc-coated steel  
Two rails and fixing elements

#### Dimensions (mm)

 (2) M6 quarter-turn serrated sliding nut  
 (3) M6 removable nut

### Bracket for fixing uprights

- Brackets for fixing the uprights, standard or technical, at the same level as the structure, obtaining a greater working surface inside the enclosure.
- They allow two pairs of uprights to be fixed back to back, doubling the working surface.
- The brackets are fixed to the structure by means of M6 self-tapping screws.
- Adjustable depth with a pitch of 25 mm.
- **Material:** zinc-coated steel.
- **Supply:** four brackets for fixing uprights and fixing elements.

# Mounting

## Cross rails and profiles for floor-standing enclosures

In the **Spacial SF**, **SM**, **SFX** and **SMX** enclosures, it is possible to create a fixing at any point of the inner volume, providing mounting planes with different widths, heights and depths.

In the case of the **Spacial SM**, it may be necessary to install vertical/horizontal adaptation profiles and 40-mm universal cross rails (1 row).

For the formation of structures inside the enclosure, it is possible to combine three types of cross rails:

- Universal cross rails of 40 (1 row), 65 (2 rows) and 90 mm (3 rows).
- Quick-fixing cross rails of 40 (1 row), 65 (2 rows) and 90 mm (3 rows).
- Light cross rails.
- Mounting plate sliding rails, see page 225.

### ★ Combination examples

**Spacial SF and SFX:** the cross rails can be fixed to the structure and among each other, offering multiple possibilities.

The universal cross rails allow installations at the same level, around the entire perimeter of the enclosure. To perform this type of installation in a **Spacial SM** enclosure, the vertical adaptation profile and the vertical 40-mm universal cross rail (1 row) are required, mounted in the back of the enclosure.

**Spacial SF:** the universal cross rails can be installed in vertical position.

# Mounting

## Cross rails and profiles for floor-standing enclosures

### Combination examples

PB500838-26

The quick-fixing cross rails can be fixed directly to the structure, quickly and easily.

■ **Spacial SF and SFX\*:**

□ They clip onto the structure and are fixed by M6 self-tapping screws, or optionally with M6 caged nuts.

■ **Spacial SM:**

- Possibility of clipping onto the adaptation profile or another cross rail.
- Fixing by means of M6 self-tapping screws.
- Fixing by means of M6 caged nuts.

*\* In enclosures Spacial SFX is not possible to mount it in depth.*

PB500839-30

The quick-fixing cross rails can be used as a support for equipment in the back of the enclosure or offset with a pitch of 25 mm, using two universal cross rails in vertical position.

PB500841-24

The 40 mm universal cross rails (1 row) used as depth-adjustable uprights with a pitch of 25 mm allow the installation of a multitude of supports for installing switchgears. The height may be adjusted with a pitch of 25 mm.

PB500842-30

The main fixing point to the quick-fixing cross rails is the 5.2 mm drill hole for M6 self-tapping screw, although they can also receive M6 and M8 caged nuts.

(1) For vertical assembly only.

**+** The universal cross rails allow any type of installation to be performed.

### Other dimensions

- For assembly in other positions, and between cross rails.
- **Material:** zinc-coated steel.
- **Thickness:** 15/10° mm.
- **Supply:** two universal cross rails, four supports for universal cross rails and fixing elements.

(2) Cross rails only for fixing cables.

# Mounting

## Cross rails for floor-standing enclosures

SM SF SFX

### Characteristics

### Light cross rails

- **Spacial SF and SFX:** direct fixing to the structure or between cross rails.
- **Spacial SM:** fixing by means of adaptation profiles and 40 mm universal cross rails (1 row), or between cross rails in any other position.
- Adjustable with a pitch of 25 mm.
- The light cross rails are equipped with a row of drill holes with a diameter of 5.2 mm and a pitch of 25 mm, which allows fixing with an M6 self-tapping screw, ref. **NSYST30M6S**.

## Tray cross rails

Tray installed on cross rails.

Allow the installation of fixed trays and telescopic rails. Quick and universal cross rails, see page 232.

# Mounting

## Connectors for symmetric C-shaped rails

### Examples

#### Combinations with connectors for symmetric C-shaped rails

- The connectors enable the formation of chassis or frames and structures for fixing switchgear, in any position inside the enclosures, allowing the fixing of DIN rails or other elements.
- See symmetric C-shaped rails.

| Characteristics | EMA connectors | EVA connectors | UCA connectors |

\* For references **NSYDLM48**, **NSYDLM48P** and **NSYDLM84** on Spacial wall-mounting enclosures the central row can only receive modules at the height of the lock when installed at the front of the enclosure. In this case, 1 module is sealed up (check our technical instructions).

# Power distribution

## Modular distribution for wall-mounting enclosures

**S3D** **S3X**

Dimension F: Distance from the protective cover plate to the inside of the door.  
 Dimension G: Distance from the device-support rail to the rear of the enclosure.

\*\* For coupling to enclosures with a depth of 200 mm, the stand-offs (ref. NSYEX608) are to be ordered separately (4 per chassis).  
 \*\*\* For enclosures with transparent door, the F dimension is reduced by 4 mm.

| Characteristics |                |      | Blanking plate                                                                                                         |

## Modular distribution for floor-standing enclosures

SM SF

### Modular distribution system

- The modular distribution system is made up of a range of accessories prepared for forming electric panels with high distribution capacity.
- The accessories are installed on a chassis mounted at the front of the enclosure, such as for example:
  - cover plates for enclosures with widths of 600 and 800, solid or cut-out in screwed-on or hinged versions. They cover 24 or 36 modules per row, depending on the width of the enclosure,
  - material support rails, fixed or with adjustable depth,
  - chassis supports for coupling non-modular equipment,
  - supports for fixing cable-distribution cable ducts.
- Sets of accessories made up of material-supporting frames with chassis and cover plates are offered for the construction of double or busbar modular chassis. All the accessories of the individual chassis system can also be combined in the same way with the double chassis or with the chassis with busbar area.

### Characteristics

### Single-chassis coupling set

- Chassis made up of vertical uprights and horizontal crossbars:
  - **Spacial SF**: they are screwed to the front frame of the enclosure.
  - **Spacial SM**: they are screwed to the front frame of the enclosure by means of the vertical adaptation profiles, see page 236.
- Easy access to the inside for component installation.

# Power distribution

## Modular distribution for floor-standing enclosures

### Modular distribution accessories

- Schneider Electric has developed a broad range of accessories for the construction of modular distribution frames, meeting the needs of the market.
- The new range has a coupling chassis, installed at the front of the enclosure, allowing the installation of:
  - cover plates with lengths of 600 and 800 mm, plain and cut-out, screwed on and hinged, with heights of 150, 200, 300, 400, 450 and 600 mm,
  - material support rails, fixed or with adjustable depth,
  - mounting plate supports, plain or perforated, for installation of non-modular devices.

### Table

The following table shows:

- The cross-section of the bars that will be used according to the current-carrying capacity in the busbar.
- The distance between the bar supports that will be installed according to the rated short-time withstand current: I<sub>cw</sub>.

| Rating (A) | Bar cross-section (mm) | Centre-to-centre distance of the supports (mm) |     |    |     |                    |
|------------|------------------------|------------------------------------------------|-----|----|-----|--------------------|

## Busbar support accessories

### Selection of the number of supports

- The number and cross-section of the bars are chosen for each phase, according to the nominal rating.
- Determine the short-circuit current  $I_{cw}$  (kA) and use the table to obtain the maximum distance between supports.
- Based on the maximum distance between supports, obtain the number of supports to be installed according to the following criterion:
  - three vertical supports must necessarily be fixed to the structure (ref. **NSYBVS...**),
  - if more than three supports are required, the support arms must be used (ref. **NSYBSA**), in even numbers (2, 4, etc.).

#### Example

- $I_n$ : 2000 A, two 60 x 10 bars are required per phase.
- $I_{cw}$ : 50 kA.
- According to the table of maximum distance between supports they must be 325 mm.
- Length of the copper bars: 1800 mm.
- $1700/325 = 5.23$ , which means 6 supports, 3 fixed vertical supports and 3 support arms + 1 extra support for the number to be even.

Table

| Sets of vertical bars    |                    |                       | Maximum distance between bar supports (mm) according to the short-circuit current, $I_{cw}$ (kA) |     |     |     |     |     |     |     |     |  |

**Note:** The current-carrying capacity values in the set of bars are given for an ambient temperature of 35°C around the busbar. The nominal rating values are indicated for IP55. The maximum values (3200 A) are achieved with ambient temperatures of less than 35°C, varying according to the configuration and position of the busbar. See enclosed table of current-carrying capacities according to temperature, page 263.

**Note:** The current-carrying capacity values in the set of bars are given for an ambient temperature of 35°C around the busbar. The nominal rating values are indicated for IP55. The maximum values (3200 A) are achieved with ambient temperatures of less than 35°C, varying according to the configuration and position of the busbar. See enclosed table of current-carrying capacities according to temperature.

### Selection of the number of supports

- The number and cross-section of the bars are chosen for each phase, according to the nominal rating.
- Determine the short-circuit current  $I_{cw}$  (kA) and use the table to obtain the maximum distance between supports.
- Based on the maximum distance between supports, obtain the number of supports to be installed according to the following criterion:
  - two supports must necessarily be fixed to the structure per enclosure. In the event of enclosure suites, only one support is required, fixed to one of the uprights of the coupling,
  - if more than two supports are required per enclosure, the support arms must be used (ref. NSYBSA).

Table of current-carrying capacities according to temperature

| Type of bars       |                       | Current-carrying capacity (A) according to the ambient temperature around the frame |      |      |      |      |
|--------------------|-----------------------|-------------------------------------------------------------------------------------|------|------|------|------|
| Cross-section (mm) | No. of bars per phase | 25°C                                                                                | 30°C | 35°C | 40°C | 45°C |
| 60 x 5             | 1                     | 840                                                                                 | 790  | 750  | 700  | 650  |

| M40                       | -                                                                                                 | -                                             | IMT36156                                                     | IMT36166                                                                                    |

# Cable management

## Cable entries

### Key features when selecting a cable entry

#### 1 - Multiple cable entries or single cable entries

Your choice depends on:

- The amount of cables going through the cable entry: generally for 3 or more cables, choose a multiple cable entry. It will make your installation faster and more economical.

In other words, your final bill will not necessarily be lower with single cable entries!

- Flexibility of installation: for high flexibility, the multiple cable entry is the right choice.

Multiple

Single

#### 2 - Entry cable material

- **Soft membranes** allow cables to be easily pushed through, but still offer a good IP rating, protecting from moisture as well as physical intrusions. Cable retention force, however, is lower than with other alternatives.

Push the membrane into a standard hole.

Make a small hole in the membrane.

Push the cable or tube through the guide hole.

Pull the cable or tube back some 20 mm to lock it.

- **Hard plastic** needs specific tools to create the opening (drill or knife) but, thanks to the cable gland, offers a very high retention force. Another use of this solution is for public places, since the hard surface prevents objects being pushed in.

- **Combined:** the material of the cable entry plate is hard plastic, but the cable is pushed through a soft membrane. In this case you have the advantages both of soft membranes (easy and fast installation, flexibility) and hard plastic membranes (high retention force, when using specific cable clamps).

PB6501702

PB6501703-30

PB6501704-35

#### 3 - Cable glands to be fitted

- Some multiple cable entries require a cable gland to be able to retain the cables and ensure the degree of protection.

PB6502706-68

### 4 - Installation possibilities

There are 4 ways to install your cable entries on the enclosure:

■ **By replacing the cable gland plate:** the standard cable gland plate of your S3D wall-mounting enclosure is unscrewed and replaced by the cable entry. A gasket between enclosure and cable entry will provide full water and dust tightness.

■ **On modified cable gland plate:** the standard cable gland plate is unscrewed and machined. A cut-out is created in it.

■ **On cable gland plate adapter:** this plate, which has the outer dimensions of a standard cable gland plate, has one or more pre-cut cut-outs of standard dimensions (FL13 and FL21).

On steel wall-mounting enclosures, the plate can replace the standard cable gland plate once the cable entry is fitted into it. On polyester enclosures, a cut-out must be created. Schneider Electric provides this service: a precise laser cut-out is factory-created upon request.

On steel floor-standing enclosures, you may either use the specific cable gland roof or create a cut-out (see expert's tip 1, page 273).

| Cable gland plate adapters |                                                                                                                               |                                                                                                                                 |                                                                                                                    |                                                                                                                   |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| Enclosure range            | 1 membrane                                                                                                                    | 2 membranes                                                                                                                     | 3 membranes                                                                                                        | 4 membranes                                                                                                       |
| Spacial S3D                | PB500604-16<br><br>NSYTL•FL                | PB500604-15<br><br>NSYTL•2FL               | -                                                                                                                  | DB300718-15<br><br>NSYTLG4FL |
| Spacial SF                 | PB502708-10<br><br>NSYSFLR●●<br>NSYSFLR●●● | PB502709-12<br><br>NSYSFLR●●<br>NSYSFLR●●● | PB500597-15<br><br>NSYSFLR●●● | -                                                                                                                 |

■ **Directly on the enclosure:** a cut-out is created on the enclosure's side according to the cable entry's dimensions (see expert's tip 1, page 273).

#### Zoom on...

FL13 and FL21 are standard cut-out dimensions frequently used in northern European countries and also used by our enclosures for several years now.

## Cable entries

PE602710-32

Full flexibility

PE600946-35

Medium flexibility

### 5 - Flexibility of the installation

■ **Full flexibility:** this means that cables can be added/removed easily, changing:

- quantity
- diameter
- position

(see expert's tip 2, page 273)

■ **Medium flexibility:**

- the amount, diameter or position of cables can be changed to a limited extent.

■ **Low flexibility:**

- it is not possible to change the above parameters.

### 6 - Reversibility

■ **Full reversibility:** this means that cables can be added/ removed easily without losing their initial characteristics, such as water tightness.

■ **Medium reversibility:** for soft membranes, once the cable has been removed, there may be a loss of IP depending on the size of the cable and the cut. For hard plastic entries or combined material entries, initial characteristics are regained by adding plugs.

■ **Low reversibility:** the cable entry must be completely replaced in order to regain the initial characteristics.

### 7 - Degree of protection (IP)

If an enclosure is to be used in a clean, dry and well insulated environment, lower levels of IP may be acceptable (IP54 or IP55).

In a dusty environment you may require higher IP levels, such as IP65 or IP68 (see expert's tip 4, page 273).

### 8 - Cable retention

Choose the right level of cable retention according to your needs. For locations accessible to the public, preferably choose a high level of cable retention.

### 9 - Cable diameter

Choose the cable entry seal according to the cable diameter.

Take into account cable diameter tolerances.

### 10 - Cable installation time

Each cable entry has different installation characteristics. Some can be installed easily and quickly thanks to the soft membrane. Take this into account depending on labour costs in your region.

# Cable management

## Cable entries

### 11 - Quantity of cables to be fitted for a given surface

For some installations, a large quantity of cables must go through the cable entry. Some cable entries can receive a high density of cables, which can result in more economical installation (fewer cable entries to be bought). For small enclosures, it may simply be impossible to install too many cable entries due to the available space on the enclosure's wall (see expert's tip 3, page 273).

### 12 - Cable entries for cables with connectors

Some cables have large connectors which cannot be pushed through tight cable clamps or cable seals. These cable entries have the unique advantage of not requiring the cable to be cut, thanks to the snap-fitting system.

A high cable retention force is provided thanks to the integrated cable fastener.

## Expert's tip

❶ Some cable entries require cut-outs to be machined on the enclosure or cable gland plate. Our customized offer provides this service. The quality of your enclosure will therefore be guaranteed since the painting operation is performed after creating the cut-outs.

❷ When the cable entry has been defined, the next step is cable management inside the enclosure. For correct thermal management, all wires must be fitted and attached so as not to create an obstacle for correct air flow. Consult our Universal Enclosures catalogue for cable management accessories (such as cable ducts) and consumables (such as cable ties).

❸ Installing a cable entry with full flexibility is the solution when a large series of enclosures is being prepared for different types of installations. By using one combination of enclosure-cable entry, you can cover a large variety of installations!

❹ When your environment requires a high level of IP for your installation, make sure you have an appropriate thermal management system to avoid condensation or overheating problems. Consult our Thermal Management offer in our Universal Enclosures catalogue and our Control Panel Technical Guide related to this issue.

\* Cut-out for reference NSYDCE16●●●.

#### Split seals for cable entries equipped with connectors

- Split seals suited to the diameter of the cable to be mounted on the cable-entry dies for the connectors. Ref. NSYDCE●●●.
- **Supply:** 10 units. Reference per unit. To be ordered in multiples of 10 (10, 20, 30, etc.).

\*\* Large seal, 24/4 die only.

(1) "Pop-out" membranes only.  
 (2) "Pop-out" membranes or cable gland installation.  
 (3) Knock out system.  
 (4) NSYDCE244 accepts 4 entries: 2 large seals and 2 small seals.

\* Reference 08898 is made up of:  
 3 cables with diameters from 14 to 26.  
 4 cables with diameters from 10 to 20.  
 32 cables with diameters from 7 to 16.

### Accessories for Multi-A

2 x 30 + 3 x 18 + 5 x 14 mm.

| Characteristics                 | Cable clamp for improved cable retention                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Blanking plugs                                                                                                                                                                                                                                |                                 |                           |        |            |    |    |     |          |               |    |    |      |          |               |    |    |       |          |               |    |    |       |          |               |                         |

### Fixing support for corrugated tube

**Mounting options:**

- directly on the enclosure,
- on a 19" swing rack and/or on cross-rails, by means of a fixing point.

■ The supports can be assembled with one another to form sets of tubes that allow a better arrangement of the cables.

■ It allows the rotation of the tube once it is fixed on the support and prevents the corrugated tube from coming loose if subject to pulling movements.

■ **Material:** polyamide (PA), black.  
 ■ **Supply:** 10 units and fixing elements. The support is supplied with its cover.

\*A: Rail of sockets without protection.

B: Rail of sockets with recessed green LED switch.

C: Rail of sockets with bi-polar magnetothermal circuit-breaker C16 type C60N 16 A curve C.

D: Suppression filter for interferences of up to 30 MHz, nominal frequency 400 Hz, attenuation 20 dB per decade.

**Kit for fixing the switchgear**

- The unit is delivered assembled.
- **Supply:** 1 DIN rail and two supports.

**Reference**  
NSYMW10MR

*Nota: there are 2 fixing screws for the reference NSYCW86 with 1 without locking*

**★ Mounting example**

NSYMW10MK + NSYMW10MR.

The Prisma functional system can be used for all types of low-voltage distribution switchboards up to 4000 A, in commercial and industrial environments.

### Switchboard design is very simple

- 1 A metal structure**  
made up of one or more frameworks combined side-by-side or back-to-back.
- 2 A distribution system**  
positioned in a lateral compartment or at the rear of the cubicle are used to distribute electricity throughout the switchboard.
- 3 Complete functional units**

  - dedicated mounting plate for device installation
  - front plate to block direct access to live parts
  - devices for on-site connections.

The functional units are modular and are arranged rationally, one on top of another, within the enclosure. The components of the Spacial SFP and those of the functional units in particular have been designed and tested taking into account device characteristics. This design approach ensures a high degree of reliability in system operation and optimum safety for personnel.

### Advantages of Prisma system switchboards

- 1 A safe electrical installation**  
The total compatibility of Schneider Electric devices with the Prisma system is a key advantage in ensuring a high level of installation dependability.
- 2 An upgradeable electrical installation**  
Thanks to modular design, Spacial SFP switchboards can be modified easily to integrate new functional units as needed.
- 3 Total safety for personnel**  
Work in a switchboard must be carried out by authorised persons in compliance with all applicable safety regulations. To increase the safety of personnel, devices are installed behind protective front plates; only the operating handles are accessible. Additional internal protection (partitions, barriers) is available to create form 2, form 3 and form 4 separation to protect against direct contacts with live parts. Terminal shields are mandatory for installation of Compact NSX and INS/INV devices in Prisma system enclosures.

Use of the components in the Prisma functional system ensures the creation of switchboards complying with standards IEC 50298, IEC 61439-1&2.

### Electrical characteristics

- Rated insulation level of main busbars: 1000 V.
- Rated operational current  $I_e$ : 4000 A.
- Rated peak withstand current  $I_{pk}$ : 220 kA.
- Rated short-time withstand current  $I_{cw}$ : 100 kA rms/1 second.
- Frequency: 50/60 Hz.

### Mechanical characteristics

- Steel sheet metal.
- Textured finish with epoxy-polyester powder.
- Grey colour RAL 7035.
- Can be dismantled.
- Can be combined side-by-side and back-to-back.
- Degree of protection: IP55 according to IEC 60529.
- Degree of protection against mechanical impacts: IK10 (IK08 for the glazed-door).
- Framework dimensions:
  - two widths:
    - W 300: cable compartment
    - W 700: device compartment or cable compartment
  - three depths:
    - D500 up to 1600 A with incoming Masterpact NT only
    - D600 up to 1600 A with incoming Masterpact NT only. Possibility to connect with cables from rear
    - D800 up to 4000 A with incoming Masterpact NT or NW. Possibility to connect to cables from rear or to connect to rear vertical busbars
  - height: 2000 mm
- Enclosures for indoor installation.

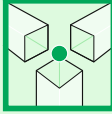

Electrical switchboards built using the Prisma functional system and Schneider Electric recommendations fully comply with international standard IEC 61439-1&2.

# Prisma functional system

## Introduction

### The forms according to IEC 61439-1&2

Decisions concerning the Form of separation and the degree of protection are the subject of an agreement between the manufacturer and the user.

In most installations, Spacial SFP cubicles do not require partitioning. In this case, the switchboard is a Form 1. Safety being one of its foremost goals, Schneider Electric offers options and features that go well beyond the recommendations of the standard.

The protection of life and property is a standard feature due to:

- front plates that require a tool to be removed
- keylocks on doors, some of which provide access to live parts
- the systematic installation of terminal shields on Compact NSX circuit breakers and Compact INS and INV switch-disconnectors
- covering of the upstream and downstream terminals on the incoming device so that operators are perfectly safe at all points in the switchboard when the incoming device is off (open).

What is more, Spacial SFP offers different levels of partitioning to create separations inside the cubicles and thus create Form 2b, 3b, 4a and 4b electrical switchboards. Electrical switchboards must meet the degree of protection IP2X to comply with standard IEC 61439-1&2.

**Form 1**

In most installations, Spacial SFP cubicles do not require partitioning. In this case, the switchboard is a Form 1. Safety being one of its foremost goals, Schneider Electric offers options and features that go well beyond the recommendations of the standard.

**Form 2b**

- Terminals for external conductors separated from busbars.
- The functional units and the terminals are separated from the busbars.

**Form 3b**

- Terminals for external conductors separated from busbars.
- The functional units are separated from each other and from the busbars.
- The terminals are separated from the busbars, but not from each other.

**Form 4a**

Terminals for external conductors in the same compartment as the associated functional unit.

**Form 4b**

Terminals for external conductors not in the same compartment as the associated functional unit, but in individual, separate, enclosed protected spaces or compartments.

### Upgradeable Prisma functional units

Functional units include switchgear mounting plates, front plates, connection supports, barriers...

Masterpact  
NW08 to NW40

Masterpact  
NT06 to NT16

Compact NSX  
up to 630 A

Compact NS  
from 630b to 1600 A

Compact NS  
up to 3200 A

Easypact  
from 100 to 630 A

Compact INS-INV250-630 A

Compact INS-INV630-2500 A

Source changeover systems  
Compact/Masterpact

Source changeover systems  
Compact INS

Fupact  
from 32 to 1250 A

Multi 9 - Acti 9

Accessories

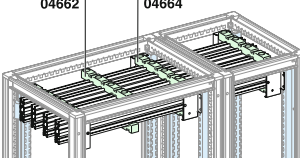

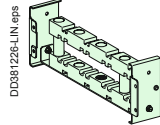

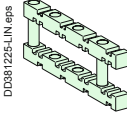

For more informations, see the catalogue Prisma P DESW016EN.

### Busbar supports

DD38535-EN eps

**Characteristics**

Number depending on Icw (kA rms/1 s)

- ≤ 25
- ≤ 30
- ≤ 40
- ≤ 50
- ≤ 60
- ≤ 65
- ≤ 75
- ≤ 85

Fixed support **04651**

DD380742-LIN-12 eps

An end stop must be fitted on the bottom support: **01109** (sold in lots of 12)

|      |   |
|------|---|
| ≤ 25 | 3 |

| ≤ 40 | 3 |
| ≤ 50 | 4 |
| ≤ 60 | 5 |
| ≤ 65 | 5 |
| ≤ 75 | 7 |
| ≤ 85 | 8 |

**Cat. no.** **04651** (set of 2 upright adapters **06502** for installation in Spacial SFP cubicle)

### Connections to the Linery BS horizontal busbar

DD385409 eps

**Characteristics**

Supplied with mounting hardware. Reference include 1 connection only. Order 1 connection per phase.

|                                                    |                           |                      |                      |

### Busbar supports

Description

3 fixed supports are compulsory to hold the busbar in position. If more than 3 supports are needed, use free supports (in addition). The bottom wedge support is used to place the busbar and ensure it is in the correct position. It does not count as a busbar support.

Number of supports depending on l<sub>cw</sub> (kA rms/1 s)

|      |     |     |
|------|-----|-----|
| ≤ 15 | 3   | 3   |
| ≤ 25 | 3+2 | 3   |
| ≤ 30 | 3+2 | 3   |

Characteristics

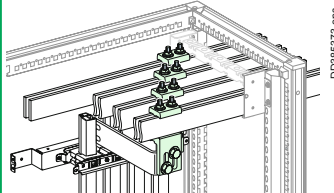

An end stop must be fitted on the bottom support **01109** (sold in lots of 12)

**Cat. no.** **04652**

### Connections to the Linery BS horizontal flat busbar

**04635** connection to 5 mm thick horizontal busbar

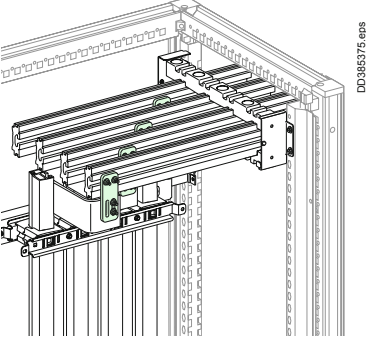

**04636** connection to 10 mm thick horizontal busbar

Characteristics: Fixings supplied, order 1 connection per phase. For part of the connection, flexible insulated busbars are needed.

### Busbar supports

**Characteristics**  
 3 fixed supports ref. 04653 are compulsory to keep the busbar vertical.  
 If more than 3 supports are needed, use free support ref. 04662 (in addition).  
 Metal shim ref. 04669 (sold in lots of 100), 5 mm thick, is screwed onto the busbar.  
 It rests on a fixed support and is used to wedge the busbar in position.

### Connections to the Linery BS horizontal flat busbar

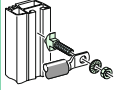

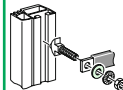

**04635** connection to horizontal busbar 5 mm thick  
**04636** connection to horizontal busbar 10 mm thick

**Characteristics**  
 For part of the connection, flexible insulated busbars are needed.  
 References **04635**, **04636** are supplied individually = 1 connection per phase.  
 Reference **04642** consists of 2 M8 x 140 screws which can replace the original M8 x 120 screws.

(1) 04767 is only compatible with Linery LGY.

### Form 1 partitioning

#### Presentation

**Decisions concerning the Form of separation and the degree of protection are the subject of an agreement between the manufacturer and the user.**

In most installations, Spacial SFP cubicles do not require partitioning. In this case, the switchboard is a Form 1.

Safety being one of its foremost goals, Schneider Electric offers options and features that go well beyond the recommendations of the standard.

The protection of life and property is a standard feature due to:

- > front plates that require a tool to be removed
- > keylocks on doors, some of which provide access to live parts
- > the systematic installation of terminal shields on Compact NSX circuit breakers and Compact INS and INV switch-disconnectors.

What is more, Spacial SFP offers different levels of partitioning to create separations inside the cubicles and thus create Form 2b, 3b, 4a & 4b electrical switchboards.

Electrical switchboards must meet the degree of protection IP2X to comply with standard IEC 61439-1 and 2.

DD3845393

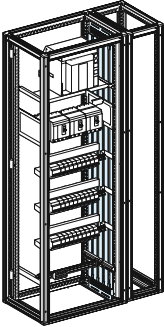

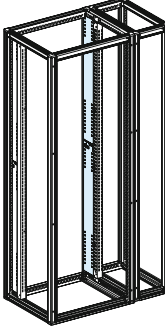

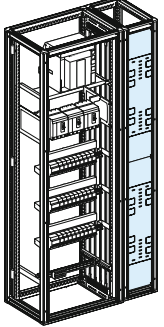

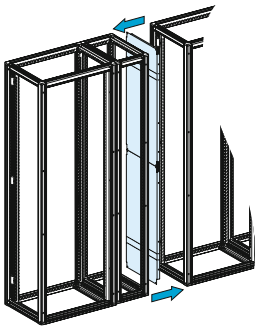

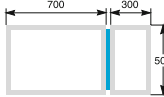

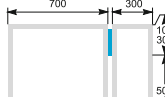

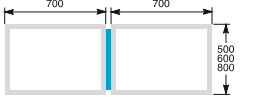

*The protection of life and property is ensured by the systematic installation of terminal shields on Compact NSX circuit breakers and on Compact INS and INV switch-disconnectors (see the pages on the functional units).*

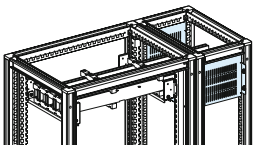

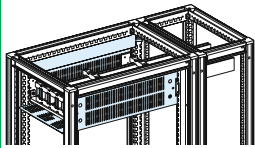

### Form 2 partitioning

Separation of busbars from the functional units:

- protection against contact with live parts upstream of the outgoing circuits
- protection against penetration of foreign solid bodies.

**Note:** when the busbars are at the bottom of the cubicle, gland plates are mandatory.

# Prisma functional system

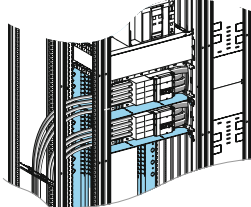

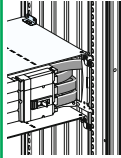

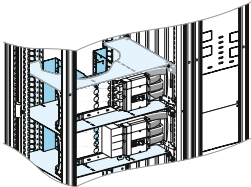

## Characteristics

### Form 3 partitioning

Separation of busbars from the functional units and separation of all functional units from one another.

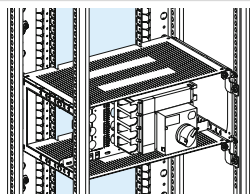

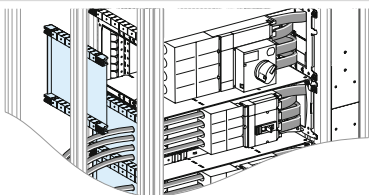

Separation of the terminals for external conductors from the functional units, but not from each other.

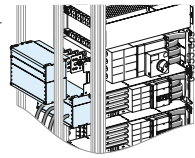

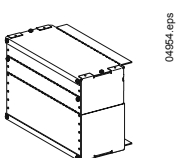

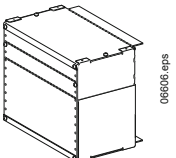

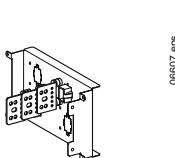

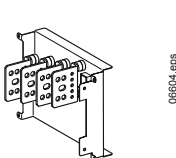

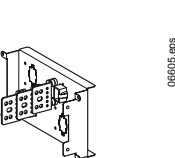

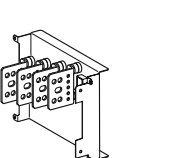

- protection against contact with live parts
- reduction in the risk of faults between the functional units (propagation of electrical arcs, etc.).

### Form 4 partitioning

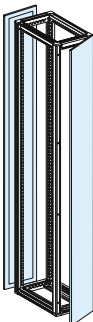

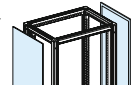

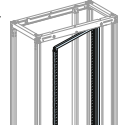

- Separation of busbars from the functional units and separation of all functional units from one another, including the terminals for external conductors which are an integral part of the functional unit.
- Protection against contacts with live parts and reduction in the risk of faults between the functional units (propagation of electrical arcs, etc.).
- Form 4a: terminal for external conductors in the same compartment as the associated.
- Form 4b: Terminals for external conductors not in the same compartment as the associated functional unit, but in individual, separate, enclosed protected spaces or compartments.

| Form 4a partition      |                                                                                                                                                                                               |                                                                                                                    |                                |

### Common characteristics

- Roof characteristics:
  - equipped with a factory-mounted polyurethane (PUR) gasket
  - supplied with mounting hardware
  - with markings for clear identification of cable-running zones
- The cables compartment can be mounted on the right or left.
- Can be combined side-by-side or back-to-back.
- Receive the IP55 cover panels.

# Enclosures for power distribution (modular)

## Introduction

> The **Spacial S3DM enclosure** for modular distribution can be equipped with:

- a modular chassis (NSYDLM...)
- with cut-out front panels for 24 to 234 modules according to the dimensions and references (see page 248),
- a 6 mm<sup>2</sup> earth connection placed between the body and the door.

The enclosure can be equipped with accessories from the Spacial standard wall-mounting range.

PB500097

S3DM enclosure (standard delivery).

PB500406-30

S3DM enclosure equipped with a DLM modular chassis.

PB500407-32

### Easily removable and reversible door

- With 20 mm return with double thickness granting excellent rigidity, opening to 120°, equipped with 2 or 3 invisible hinges.
- Three locking points for heights of more than 600 mm.
- Perforated rails on the hinge side of the door, with drill holes with a diameter of 4.2 mm in steps of 25 mm.

PB500408-23

### Dedicated accessories

The DLM modular chassis consists of metal cut-out front panels which can clip on with any screws. Rigid structure made from galvanised steel. The depth of the chassis can be adjusted from 40 to 85 mm, between the rail and the front panel, allowing the installation of all types of devices.

For enclosures with a depth of 150 mm, the chassis can be installed at the front or on the backstuds at the rear. It is possible to adjust its depth using the adjustable supports (NSYSDCR type).

It can also be equipped with a plain mounting plate, see page 214.

\* References **NSYDLM48**, **NSYDLM48P** and **NSYDLM84P**, the central row cannot receive modules at the height of the lock (check our technical instructions) when installed at the front of the enclosure. In this case, 1 module is sealed up.

\*\* DLM modular chassis, see page 248.

The provided dimensions are with the modular chassis, which is the most commonly used accessory with this enclosure.

# Enclosures for power distribution (terminal blocks)

## Introduction

➤ The **Spacial S3DB enclosure** is made to be equipped with terminal blocks. It is ready to be equipped with a ladder mounting plate and a symmetrical DIN rail (to be ordered separately). The body does not have cable gland opening. The **Spacial S3DB enclosure** is the ideal coupling enclosure with FL21 cut-out.

### Safety

Welding studs on door and body (earth cables to be ordered separately).

### Smart

Example of installation with the ladder mounting plate.

Vertical position.

Horizontal position.

\* This range is completed by the Spacial S3DB.

# Enclosures for power distribution (terminal blocks)

## Dimensions

### Spacial S3DB

A: Enclosure height  
 B: Enclosure width  
 C: Enclosure depth

- (1) With ladder mounting plate installed.
- (2) M6 x 17.5 mm earthing stud.
- (3) Stud centre-to-centre distance.
- (4) Centre-to-centre distance of the holes for direct fixing.
- (5) Drop-leaf door.

The provided dimensions are with the ladder mounting plate, which is the most commonly used accessory with this enclosure.

# Enclosures for power distribution (terminal blocks)

## Dimensions

### Spacial S3DBFL

**New**

➤ Thalassa PHD is suitable for outdoor public areas thanks to its multiple virtues:

- pressure and shock resistant (IEC 61439-5: 2010),
- anti-posting thanks to its special ribbed-surface door,
- insulated (ready to be Class II according to IEC 61439-1: 2011).

➤ Spacial S3HD and SFHD are designed for outdoor private areas. They are engineered to resist aggressive environments (anti-corrosion certification class C4H, ISO 12944:1999).

PB502611-34

### Tough

PHD: Heavy Duty polyester reinforced with a double layer of fiberglass. Ultra-resistant, anti-vandalism.

PB502673-29

### Heavy Duty accessories

Dedicated accessories to resist outdoor, harsh environments: the all-new, slim fanbox (see page 336 and 338).

PB502648-11

### Simplicity

Installation simplified: easy to be lifted with up to 1000 kg-loaded equipment. HD lifting accessories also available.

DB300824-120

### Thermal management solutions

3 ventilation architectures studied to help protect the equipment installed inside from overheating and humidity.

PB502662-30

### Fully equipped

Standard, pre-installed equipment includes:

- a curved canopy to avoid water stagnation
- a door retainer to keep the door open even with strong wind or when a vehicle passes by
- an aluminium cable gland plate to easily drill holes and avoid corrosion
- a document pocket to stock your documents in a practical place.

PB502670-29

### Upper ventilation module

The newly engineered roof ventilation accessory helps to prevent creation of condensation (one of the causes of corrosion).

PB502674-25

### Anti-vandalism

PHD and SFHD: the handle with keylock and additional padlock hole (padlock not included) helps to secure the equipment inside. It is standard equipment.

## Enclosure with ventilated canopy and plinth-type open bottom part

## Common top views

- (1) 4 bosses with M8 inserts and studs for direct fixing of mounting plates.
- (2) Bosses designed to accommodate M8 inserts, ref. **NSYTEX8**. They are placed:
  - On the back of the enclosure, from the height of 1000 mm. They allow the fixing of partial mounting plates and assorted equipment.
  - On the top and bottom parts of the enclosure. They are used for fixing the step slides, an internal door, 19" chassis, etc.
- (3) Dimensions for fixing on the floor or on a plinth.
- (4) Entry dimensions, door open.
- (5) Dimension of 28 mm for enclosures with heights of more than 1000 mm (height after the installation of the plain mounting plates with reinforcement foldings).
- (6) With a width of 1250 mm in standard supply, 500-mm door on the left and 750-mm door on the right.

### General overview

■ **Introduction**

Schneider Electric's Spacial range offers enclosures (SF cubicles and S3D boxes) certified for installation in seismic risk zones of various intensities. The zones used to classify the enclosures are those defined by the Uniform Building Code (UBC).

■ **UBC zones**

The UBC has defined 6 zones (0, 1, 2A, 2B, 3, 4, 5) according to ground acceleration. The illustration below, taken from IEC 60721-2-6 (Figure 5), uses the zones defined by the UBC, combining, for greater clarity, zones 2A and 2B in zone 2.

■ **Certification of Spacial enclosures**

The tests used for certification are those specified by the international standard and adapted for the requirements of nuclear industry. The reference documents are as follows:

- M12D0168610 (EDF): Earthquake resistance tests specified for the nuclear industry. This document is the update of document CRT 91-C-112-00 produced following the Fukushima accident
- IEC 60068-3-3 (first edition): international standard.

### Certification of Spacial enclosures

■ **Enclosures for weak to medium earthquakes:**

The standard offer of SF cubicles and S3D\* boxes is certified to withstand all seismic risks up to UBC zone 3 for the following applications:

- SF cubicle applications:
  - Control and automation;
  - Industrial electronics (19" frame);
  - LV power distribution (Spacial SFP).
- S3D box applications:
  - Control and automation.

■ **Enclosures for medium to strong earthquakes:**

The Spacial SF 5G cubicle is certified to withstand any seismic risk up to UBC zone 4 thanks to its reinforced structure, its special panel mounting system and its locking system. It has been tested for the following applications:

- Control and automation;
- Industrial electronics (19" frame);
- LV power distribution (Spacial SFP 5G).

■ **Enclosures for very strong earthquakes:**

The Spacial SF S3D 6G cubicle is certified to withstand any seismic risk up to UBC zone 4 thanks to its panel thickness, its locking system, its wall mounting brackets and its reinforced chassis mounting. It has been tested for the following application:

- Control and automation.

#### Definitions

**Ground acceleration:**

Ground acceleration resulting from a given earthquake.

Note: In practice, ground acceleration can be broken down into horizontal and vertical components.

**Floor acceleration:**

Acceleration of a particular floor in a building (at the location of an equipment item) resulting from a given earthquake.

Note: In practice, floor acceleration can be broken down into horizontal and vertical components.

#### Test results

(1) The IEC 60068-3-3, 1991-02 standard has not yet been updated since the events at FUKUSHIMA.

(2) Floor acceleration = a<sub>g</sub> x K x D (§8.2.7), where:

K = amplification factor = 3 (Table 4 of IEC 60068-3-3)

D = direction factor = 1 for the horizontal direction, = 0.5 for the vertical direction (Table 5 of IEC 60068-3-3).

(3) Approximate Uniform Building Code values for the zone.

(4) MSK (Medvedev-Sponheuer-Kamik, corresponding to the modified Mercalli intensity scale).

(5) The 5G and 6G designations refer to the amplified maximum acceleration value read respectively on the horizontal RRS of the EDF standard CRT91C11200 and on vertical RRS of the EDF MRI standard for large equipment.

(6) Except larger enclosures. Consult us.

**Comment:** g = acceleration due to gravity rounded off to the nearest whole number (1g = 10 m/s<sup>2</sup>).

### Test Response Spectra (TRS)

Spectra for SF 3G cubicles

Spectra for SF 5G cubicles

Spectra for S3D 6G boxes

— TRS<sub>x</sub>    — TRS<sub>y</sub>    — TRS<sub>z</sub>

x = front-rear horizontal axis

y = left-right horizontal axis

z = vertical axis

○ Amplified maximum acceleration: acceleration expected at the center of gravity of the equipment

○ Maximum floor acceleration: unamplified acceleration

New

SF

> **Spacial SF 5G** cubicles (for control and automation) and **Spacial SFP 5G** cubicles (for LV power distribution) have been designed to withstand earthquakes up to UBC zone 4.

PB502602-47

PB502602-70

### Reinforced crosspieces

- Two reinforced crosspieces ensure the structure's mechanical strength.

PB502633-32

### Panel mounting

- Mounting systems prevent loosening of the screws.

PB502634-17

PB502634-21

### Security locking system

- Seismic locking system.
- Special bars and handle to prevent any accidental door opening under severe vibration conditions.

PB502636-40

### Reinforced plinths

- New reinforced monobloc plinths.

**NB:** - The width (300 mm) of the Spacial SFP 5G cubicle for the busbar duct is not compatible with the Spacial SF 5G cubicle.  
 - The customer must ensure good cubicle/base connection.

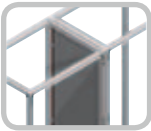

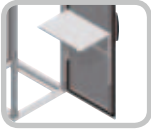

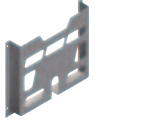

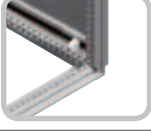

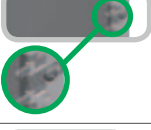

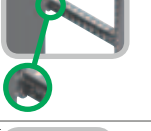

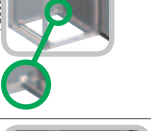

## Compliance with local standards

| Level and specifications of the standard |                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                      |

**NB:** None of the accessories is certified 5G.

New

S3D

> **Spacial S3D 6G** cubicles are designed to withstand earthquakes up to UBC zone 4.

### Strength

- Panel thickness:
- Casing + door: 20/10 mm;
- Entry flange: 15/10 mm.

### Security locking system

- EDF 1600 security locking system with captive key.

### Reinforced mounting plate

- Mounting plate reinforcement.
- Increased number of attachment points.

### Wall mounting

- Reinforced bracket for wall mounting.

**Comment:** None of the accessories is certified 6G.

**New**

➤ The **Spacial S3D 6G K3** cubicle meets K3 requirements in accordance with RCCE 2012.

### Strength

- Panel thickness:
- Casing + door: 20/10 mm;
- Entry flange: 15/10 mm.

### Decontaminatable smooth paint, PID 100 series

- In compliance with CCTR 91.C.031.06 Two coats of paint (minimum thickness: 60 μ).
- Epoxy-polyester powder, PID 100 series.
- PIA-PIC 100 on request.

### Security locking system

- EDF 1600 security locking system with captive key.

### Reinforced mounting plate

- Mounting plate reinforcement.
- Increased number of attachment points.

### Earth continuity

Earth continuity between the interior and exterior of the cubicle is provided by 2 opposite welded studs (external earth screw principle).

### Wall mounting

- Reinforced bracket for wall mounting.

**Comment:** None of the accessories is certified 6G K3.

New

### 1 > Special dimensions

We meet the K3 requirements as per RCCE 2012 for the special dimensions mentioned below. These dimensions appear in the Reference File.

| Height | Available depths |  |             |  | Width           |  |                 |  |                 |  |                 |  |
|--------|------------------|--|-------------|--|-----------------|--|-----------------|--|-----------------|--|-----------------|--|
| 1200   |                  |  |             |  | 200/250/300/400 |  | 200/250/300     |  |                 |  |                 |  |
| 1000   |                  |  |             |  | 200/250/300/400 |  | 200/250/300/400 |  |                 |  |                 |  |
| 800    |                  |  |             |  | 200/250/300     |  | 200/250/300     |  | 200/250/400     |  | 200/250/300/400 |  |
| 700    |                  |  |             |  | 200/250/300     |  | 200/300         |  | 200/250/300/400 |  |                 |  |
| 600    |                  |  |             |  | 200/250/300     |  | 200/300         |  | 200/250/300/400 |  |                 |  |
| 500    | 150/200          |  | 150/200/250 |  | 200/250/300     |  | 200/250/300     |  |                 |  |                 |  |
| 400    | 150/200          |  | 150/250     |  |                 |  |                 |  |                 |  |                 |  |
| 300    | 200              |  | 150/200/250 |  |                 |  |                 |  |                 |  |                 |  |
|        | 250              |  | 300         |  | 400             |  | 500             |  | 600             |  | 800             |  |

### 2 > Cut-outs

We meet the K3 requirements as per RCCE 2012 for the cut-outs mentioned below. These cut-outs appear in the Reference File.

#### Customization areas ensuring K3 certification

Door

Entry flange

Casing

| Depth | A   |
|-------|-----|
| 150   | 65  |
| 200   | 82  |
| 250   | 98  |
| 300   | 115 |
| 400   | 148 |

| AFNOR / RAL | Colors of PIC 100 series |
|-------------|--------------------------|
| AFNOR       | 1550                     |
|             | 1570                     |
|             | 2550                     |
|             | 2570                     |
| RAL         | 1003                     |
|             | 5005                     |
|             | 5024                     |
|             | 7036                     |

Others colors available: consult us.

### 4 > Packaging

We can produce a special corrosion protection packaging (Gardac type).

# Seismic and nuclear enclosures

## A demanding nuclear market

New

Our range of **Spacial 3D nuclear** cubicles meets the K3 requirements of RCCE 2012. The Schneider Electric cubicle production plant has established processes to ensure K3 certification.

➤ Establishment of a line architecture adapted to the requirements mentioned in RCCE 2012, implying:

- Hold points;
- Check points;
- Control of "AIP" activities that are important for protection

➤ Manufacturing completion report with:

- Declaration of conformity.
- Monitoring document.
- Report and test report.

➤ Establishment of a Particular Quality Assurance Plan (PQAP)

➤ Reference documents for the nuclear industry: RCC-E, CCTR, FNP, packaging technical specification, "PMUC" (products and materials used in nuclear generating stations), SGAQ-2013-03, Arrêté INB 2012

New

### Nuclear safety has 3 objectives

Control reactivity

Cool the fuel

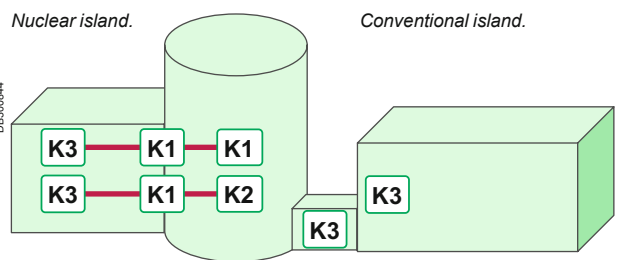

Confine radioactive products

### Technical choices and safety rules

The technical choices and safety rules are stipulated by the operator with full responsibility relative to the French nuclear safety authority (ASN) (representing the state) depending on the location in the installation and whether or not they form part of the safety circuits. The products undergo tests to ensure their operation in accidental conditions.

A safety circuit consists of several equipment items. Their certification depends on their location. Equipment interfacing between the core and the other buildings is always K1 (risk of radioactive leakage).

### Certifications necessary to work in the nuclear industry

2 certifications are necessary to work in the nuclear industry

- Product and equipment certifications imply demanding performances validated by technical documents and by tests. In the event of a change in the product, it must be **explained and justified** that the initial certification is maintained.
- Certifications of industrial organizations and services related to products and equipment.

The products equipping French nuclear facilities in this catalogue comply with the RCC-E 2012 standard.

### Terminology of equipment classifications used in nuclear power stations

EIP: Equipment Important for Protection.  
 IPDE: Important for operating availability.  
 CDS: safety-classified.  
 Schneider is concerned only by E1 (elec. classification).

### Tests corresponding to specific classifications for EIP equipment

- K3 > ref. tests + functional operating limits + ageing + earthquake
- K3AD > K3 + environmental resistance (irradiation, heat, spraying)
- K2 > K3 + resistance to ageing irradiation (250 Kgy)
- K1 > K2 + resistance to accidental irradiation (600 Kgy) + ADR
- AG > K1 reinforced only for EPR power stations

## > Spacial VDM

### Simplified installation

Pre-installed fixed or swing rack; earth connection placed between the door and the body; the enclosure is ready to use; the cardboard packaging can be reused after cabling.

## > Spacial S3D

### Practical

Cable-gland plates at top and bottom:  
 ■ on the rear part (2-body enclosure),  
 ■ on the body (1-body enclosure).

## > Spacial SF

### Suitable metal enclosure

Enclosure prepared for the installation of standard 19" racks in professional telecommunication, voice, data and electronic facilities, by means of 19" fixed and swing racks, see page 378.

This range can be configured according to your needs

4 different services available:

Assemble to order

Mounting of standard accessories

Painting

Machining

# Electronic application

## Characteristics

| Characteristics | Spacial SF electronic application enclosure |
|-----------------|---------------------------------------------|
|-----------------|---------------------------------------------|

- Structure: top and bottom frame and vertical uprights.
- Transparent front door with Securit® glass.
- Plain rear door.
- Standard locking system with handle and 5-mm double-bar insert.
- Removable roof.
- External fixing side panels double folded to increase their rigidity with captive fixing screws that reduce installation time.
- In enclosures with widths of 600 and 800 mm, it is possible to install fixed or swing racks, to be ordered separately.

|                |                                    |
|----------------|------------------------------------|
| Material       | Sheet steel                        |
| Finish         | Painted with epoxy-polyester resin |
| Colour         | RAL 7035 grey                      |
| Certifications | BV, DNV, UL*, CUL                  |

## Cable-gland plates

| Characteristics |           | Plain                                   | With 1 entry                                                                                                                                       | With 2 entries                                                                                                                     | Ventilated                                                                                                                                                                                                                          |
|-----------------|-----------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |           | Maximum compact water/dustproof design. | Facilitates the entry of cables thanks to a longitudinal opening.                                                                                  | Cable entry for very deep enclosures (600 and 800 mm). Two longitudinal openings allowing a large number of cables through.        | Plates for cable entry from the bottom of the enclosure. Each plate has a hole with an 8-mm diameter, covered with a plug, for cases in which earthing needs to be performed by an earthing cable or braid (elements not supplied). |
| Material        |           | Galvanised steel                        |                                                                                                                                                    |                                                                                                                                    | Galvanised steel                                                                                                                                                                                                                    |
| Thickness       |           | 15/10 <sup>e</sup> mm                   |                                                                                                                                                    |                                                                                                                                    | 15/10 <sup>e</sup> mm                                                                                                                                                                                                               |
| Fixing          |           | -                                       |                                                                                                                                                    |                                                                                                                                    | Fixing by C-shaped clip, fixed with screws, providing electrical continuity through the clip                                                                                                                                        |
| Supply          |           | Plain plate and fixing elements         | Plate with 1 entry; self-extinguishing polyurethane adhesive gasket with cross-section of 15 x 25 mm (guarantees good sealing) and fixing elements | 1 plate with 2 entries; polyurethane adhesive gasket with cross-section of 15 x 25 mm (guarantee good sealing) and fixing elements | 1 ventilated plate with one entry, self-extinguishing polyurethane adhesive gasket with cross-section of 15 x 25 mm, and fixing elements                                                                                            |

# Electromagnetic protected steel enclosures

## Introduction

### General

The increasing presence of electromagnetic interference in industrial environments, together with the use of equipment susceptible to such interference requires the use of suitably protected enclosures.

In order to suppress electromagnetic interference, S3HF enclosures, due to the type of sheet metal and special gaskets used, fulfil two functions:

- Provision of adequate screening, with the effectiveness of a Faraday cage.
- Ability to provide effective protection of sensitive equipment by using galvanised sheet metal chassis, and by following recommended installation procedures.

### Electromagnetic interference

Electromagnetic disruptions comprises an electrical field E generated by a differing potentials, and a magnetic field M, caused by current circulation, which combine to form electromagnetic field.

The electromagnetic interference or "noise" is a disruptive electrical signal which affects the useful signal and it likely to cause a malfunction.

Interference can be carried through the conductors or emitted through the environment.

### Main sources of electrical interference and equipment sensitive to it

- Programmable controllers.
- Electronic circuits or boards.
- Regulators.
- Input signal cables (detectors, sensors, measurement probes).
- Analogue signal cables.

#### Main sources of electrical interference

| Material                   | Frequency range   |
|----------------------------|-------------------|
| Motors                     | 10 kHz... 100 MHz |
| Transformers/rectifiers    | 10 kHz... 100 MHz |
| Inductive load switching   | 50 kHz... 10 MHz  |
| Spot welders               | 10 kHz... 50 MHz  |
| Fluorescent lamps          | 100 kHz... 3 MHz  |
| Relays, contactors         | 10 kHz... 200 MHz |
| Switching power sources    | 10 kHz... 30 MHz  |
| Computers (internal clock) | 50 kHz... 200 MHz |
| Variable speed drives      | 10 kHz... 100 MHz |
| Induction furnaces         | 0... 10 kHz       |
| Power cables, etc.         | 0... 10 kHz       |

### Attenuation level of EMC fields

The waves of electrical or magnetic fields are reflected when they meet the sheet metal of the enclosure.

The effective rate of the screening or dampening "a" of the incident wave is measured in decibels (dB) using the following formulae:

$$a = 20 \log \frac{E_0}{E_1} \text{ (dB) for electrical fields,}$$

$$a = 20 \log \frac{H_0}{H_1} \text{ (dB) for magnetic fields,}$$

- $E_0$  and  $E_1$  are the current values of the electrical field, before entering and after entering the enclosure respectively.
- $H_0$  and  $H_1$  are the magnetic field values.

# Electromagnetic protected steel enclosures

## Introduction

### Installation

According to the type of interference generated by the devices:

- Low frequencies, "conducted interference" (up to 30 MHz),
  - High frequencies, "radiated interference" (higher than 1 MHz),
- the rules to be taken into account relate to the choice of components that provide the most economical solution to complete the installation.

#### Low-frequency interference

- Importance of the protection systems:
  - filters, overvoltage suppressor, isolating transformer for the power supply,
  - cable length.

#### High-frequency interference

- Importance of the installation method:
  - earth connections, cable length and section,
  - cable selection and rules, cable runs, connections,
  - enclosures and installation.

### Specifics

#### Screen connections

It is recommended to earth screens at both ends. In addition, it is advisable to increase the number of intermediate earth connections.

If the screen is only earthed at one end, there can be a considerable difference in potential between the two ends. In addition, this screen will be ineffective against external high-frequency interference.

#### Transformers

The transformer chassis must be mounted, metal to metal, on the reference potential plate, that is, on a plain chassis supporting the equipment.

#### Cable runs

The metal ducts and conduits, when correctly connected, provide an extremely effective second screen for the cables.

Cable ends must be screwed to the metal enclosures in order to provide an effective connection.

#### Enclosures

The interfering and sensitive components, cables etc. should be installed in separate enclosures or located at some distance from each other.

*Note: For further information, consult your local sales office or our educational leaflet entitled "Electromagnetic compatibility".*

# Electromagnetic protected steel enclosures

## Introduction

PE50205-46

EMC box, IP55.

### Spacial S3HF wall-mounting enclosure IP55 IK10

From H 400 x W 300 x D 200 to H 1200 x W 800 x D 300 mm

- Metal monobloc enclosures constructed from special ALU-ZINC 150 sheet. Body constructed from single folded and welded sheet.
- The enclosure surface, comprising 55 % aluminium ensures good reflection of radiated electromagnetic interference.
- Textured epoxy polyester external paint finish, colour grey RAL 7035.
- Integral, galvanised, sheet steel, plain chassis (reference potential plate). The low resistivity of this plate facilitates earth continuity. Special body/door gasket (IP + EMC) providing both environment protection and continuity between the door and body of the enclosure. Body completely sealed, without any cable entries or apertures. Integral earth braid between enclosure body and door, ensuring good earthing and, in consequence, good electromagnetic compatibility. Metal closing points with earth continuity, thus improving overall screening.

PE501663-46

EMC enclosure, IP55.

### Spacial SMHF floor-standing enclosure IP55 IK10

From H 1800 x W 800 x D 400 to H 2000 x W 800 x D 600 mm

- Metal monobloc enclosure constructed from special ALU-ZINC 150 sheet. The enclosure surface, comprising 55 % aluminium ensures good reflection of radiated electromagnetic interference.
- Exterior painted with an epoxy polyester external powder paint finish, colour grey RAL 7035.
- Integral galvanised sheet steel plain chassis (sheet potential reference). The earth continuity is much easier thanks to its weak resistance.
- Special body-door seal (IP + EMC), providing not only water tightness, but also electrical continuity between the door and the body, necessary for those assemblies. Cable gland plate with special built-in seal (IP + EMC).

PE501662-46

EMC floor-standing enclosure, IP55.

### Spacial SFHF suitable enclosure IP55 IK10

From H 1800 x W 600 x D 600 to H 2200 x W 800 x D 800 mm

- Metal, extendable enclosure constructed thanks to a closed triangular profile, door and panel from special ALU-ZINC 150 sheet. The enclosure surface, comprising 55 % aluminium ensures good reflection of radiated electromagnetic interference.
- Exterior painted with an epoxy polyester external powder paint finish, colour grey RAL 7035.
- Integral galvanised sheet steel plain chassis (sheet potential reference). The earth continuity is much easier thanks to its weak resistance.
- Special body/door gasket (IP + EMC) providing both environmental protection and electrical continuity between the door and body of the enclosure.
- Integral earth braid between enclosure body and door, ensuring good earthing and, in consequence, good electromagnetic compatibility.
- The suite joining set is also available for the EMC enclosures, IP55.

**This range can be configured according to your needs**

# Electromagnetic protected steel enclosures

## Introduction

The presence of 55 % aluminium on the surface of the sheet metal ensures good reflection of electromagnetic waves.

The next illustrations indicates the attenuation (dB) curves related to the frequency (MHz).

### Attenuation of the Spacial S3HF enclosure

General information on Electromagnetic Compatibility, see pages 386 and 387.

### Floor-standing compact enclosure

The enclosure is tested with earth braids mounted on all claddings (test performed following IEC 61587-3).

### Floor-standing suitable enclosure

Enclosure is tested with its sides panels and earth braids mounted on all claddings (Test performed following IEC 61587-3).

# Electromagnetic protected steel enclosures

## Characteristics

### Characteristics Spacial S3HF

Single-piece metal enclosures made from special sheets of ALUZINC 150.  
The presence of 55 % aluminium on the surface of the sheet metal ensures good reflection of electromagnetic waves.

■ **Body**

- single-piece body, folded and welded,
- entirely sealed body with no cable entry and no opening.
- **Equipped with four shouldered backstuds allowing direct fixing of the mounting plate**
- built-in plain mounting plate made from galvanised sheet steel (potential reference sheet),
- its low resistivity promotes earth continuity,
- direct fixing or using wall-fixing lugs, ref. **NSYPFCR** (to be ordered separately).

■ **Door**

- the special body-door gasket (IP + EMC) provides, in addition to water and dust tightness, electric continuity between the door and the body of the enclosure,
  - the metal lock with earth continuity helps improve the general shielding,
  - an earthing braid added to the enclosure between the body and the door guarantees a good earth connection and, consequently, good electromagnetic compatibility,
  - 3 mm double-bar lock as standard delivery (if a 405 key is needed it is possible to mount ref. **NSYCLL405CRN**).
  - Enclosure delivered with solid mounting plate.
- Other sizes: consult us.

## Accessories

### All mounting accessories are compatible with the SF and SM standard range.

- Mounting plate (see page 220).
- Rails (see page 230).
- 19" frame (fixed and swinging) (see page 378).

PE500084-49

### Earth braids

- They guarantee the earth connection for high frequencies, avoiding the disturbing electric currents that are produced.
- **Material:** tinned copper.
- **Supply:** 10 earth braids (nuts and washers not included).

### EMC coupling kit

- Used to join enclosures side-by-side or depthwise. Special gasket for EMC solution. Attenuation level is decreased by 5 db when enclosures are joined (please consult us).
- **Ingress protection rating:** IP55.

# Enclosures for explosive atmospheres

## Introduction

PB500069-52

PB500060-47

PB500061-26

### Potentially explosive atmospheres: important information

#### > What is ATEX?

- It is a term commonly used to describe potentially EXplosive ATmospheres and standards for protection systems and equipment.
- Two European directives, ATEX 99/92/CE and ATEX 94/9/CE, and international standards IEC 60079 and IEC 61241, harmonized with EN European standards, apply to this field.

#### > How is a potentially explosive atmosphere defined according to ATEX?

- An potentially explosive atmosphere is defined as a mix of flammable substances in the form of gas, vapour, dust (cloud or deposit) which, in air and under normal atmospheric conditions, can completely or partially catch fire in the form of an explosion when exposed to a source of ignition.

#### > Classification of an explosive atmosphere

- They are classified into groups and zones according to directive 99/92/CE and IEC standards as follows:

| Destination                 | Categories/presence of potentially explosive atmosphere | Hazardous zones        | Atmosphere |
|-----------------------------|---------------------------------------------------------|------------------------|------------|
| Group I Mines               | M1 and M2                                               | Gas and dust (G & D)   |            |
| Group II surface Industries | 1 Permanent or frequent                                 | Zone 0: gas and vapour | G          |
|                             |                                                         | Zone 20: mist and dust | D          |
|                             | 2 Occasional                                            | Zone 1: gas and vapour | G          |
|                             |                                                         | Zone 21: mist and dust | D          |
|                             | 3 Rare                                                  | Zone 2: gas and vapour | G          |
|                             |                                                         | Zone 22: mist and dust | D          |

### Equipment for potentially explosive atmospheres

- Since 1st July 2003, European directive ATEX 94/9/CE has made it compulsory to use certified electric or non-electric equipment when it must be installed in zones with explosive atmospheres (gas or dust).
- Certification must be provided by a body which is notified according to the same directive.
- The body notifies its assessment of the quality of the production and certifies that the product complies with the health and safety demands defined in the directive and the international standards.
- The certificate shows the category of the product by marking, and thus the zone and atmosphere in which it can be used.
- The standards define the following types of protection for electric equipment:

| Electrical equipment |              |                                         |                 |                                           |
|----------------------|--------------|-----------------------------------------|-----------------|-------------------------------------------|
| CENELEC              | IEC          | Gas: symbol of the types wof protection | CENELEC/IEC     | Powder: symbol of the types of protection |
| EN 60079-0           | IEC 60079-0  | General rules                           | IEC/EN 61241-0  | General rules                             |
| EN 50015             | IEC 60079-6  | 0-oil immersion                         | IEC/EN 61241-1  | tD-protection by enclosures               |
| EN 50016             | IEC 60079-2  | p-pressurised enclosures                | IEC/EN 61241-4  | pD-protection by pressurisation           |
| EN 50017             | IEC 60079-5  | q-powder filling                        | IEC/EN 61241-11 | iD-protection by intrinsic safety         |
| EN 60079-1           | IEC 60079-1  | d-flameproof enclosures                 | IEC/EN 61241-18 | mD-protection by encapsulation            |
| EN 60079-7           | IEC 60079-7  | e-increased safety                      |                 |                                           |
| EN 50020             | IEC 60079-11 | i-intrinsic safety                      |                 |                                           |
| EN 60079-15          | IEC 60079-15 | n-type of protection "n"                |                 |                                           |

- Enclosures are certified as components. They will be assembled with other ATEX electrical, pneumatic and hydraulic components, among others to form a final solution which, in turn, must be ATEX-certified and subject to a declaration of conformity.

#### Definition

Product directive 94/9/CE: defines the manufacturers' obligations.

Personal protection directive 99/92/CE: defines the users' obligations.

#### Degree of protection:

In hazardous areas, equipment is required to offer a minimum degree of protection of IP54, but it can be tested or certified with a higher degree of protection.

# Enclosures for explosive atmospheres

## Introduction

### Fields of application of Schneider Electric ATEX enclosures

## > 3 Material solutions for wall-mounting enclosures

**Steel**

**Stainless-steel**

**Polyester**

#### Three types of enclosures

- All the wall-mounting enclosures presented in this brochure comply with standards for protection against the increased risk of explosion in atmospheres charged with gas (G) and/or dust (D).
- The Schneider Electric offer, designed to be used in group II, is classified as category 2.

| Destination                 | Categories/presence of potentially explosive atmosphere | Hazardous zones        | Atmosphere |
|-----------------------------|---------------------------------------------------------|------------------------|------------|
| Group I Mines               | M1 and M2                                               | Gas and dust (G & D)   |            |
| Group II surface Industries | 1 Permanent or frequent                                 | Zone 0: gas and vapour | G          |
|                             |                                                         | Zone 20: mist and dust | D          |
|                             | 2 Occasional                                            | Zone 1: gas and vapour | G          |

*Zone of application of Schneider Electric ATEX wall-mounting enclosures.*

- Category 2 products can be used as category 3.
- Our products are qualified for increased safety "e" (Ex e) but not for explosionproof safety "d" (Ex d).
- The marking of the wall-mounting enclosures is shown page 542.
- The wall-mounting enclosures offer a degree of protection IP66 according to EN 60529, exceeding the recommendations of the ATEX directive.
- Certification of our production sites and inspection procedures guarantees observance and consistency of the quality level.

# Enclosures for explosive atmospheres

## Introduction

PB601817-54

### > Industrial environments, equipment rooms

#### Spacial S3DEX steel enclosure

- The **Spacial S3DEX steel enclosure** is certified by the LCIE with no. LCIE 02ATEX0037U (component certification).
- Ten sizes: from 300 x 200 x 150 mm to 1000 x 800 x 300 mm.
- Degree of protection: IP66.
- Ambient temperature limits:  $-20^{\circ}\text{C} \leq T_a \leq +40^{\circ}\text{C}$ .
- Resistance to external mechanical impacts: IK10.
- Structured finish, epoxy-polyester powder paint, RAL 7035 grey colour.

PB601818-56

### > Laboratories, agri-business industry, specific hygiene and corrosion demands

#### Spacial S3XEX stainless-steel enclosure

- The **Spacial S3XEX stainless-steel enclosure** is certified by the LOM with no. LOM 09ATEX3068U (component certification).
- Seven sizes: from 300 x 200 x 150 mm to 1000 x 800 x 300 mm.
- Degree of protection: IP66.
- Ambient temperature limits:  $-20^{\circ}\text{C} \leq T_a \leq +60^{\circ}\text{C}$ .
- Resistance to external mechanical impacts: IK10.
- Scotch-Brite® brushed finish.

PB601819-58

### > Seaside, petrochemical, severely corrosive environments

#### Thalassa PLMEX polyester enclosure

- The **Thalassa PLMEX polyester enclosure** is certified by the LOM with no. LOM 10ATEX3051U (component certification).
- Seven sizes: from 307 x 255 x 164 mm to 1056 x 852 x 350 mm.
- Degree of protection: IP66.
- Ambient temperature limits:  $-20^{\circ}\text{C} \leq T_a \leq +60^{\circ}\text{C}$ .
- Resistance to external mechanical impacts: IK10.
- Black colour.

## [!] In accordance with the ATEX directive

- The enclosures bear the marking shown page 542.
- The enclosures offer a degree of protection of IP66 according to EN 60629, reaching the highest dust protection according to ATEX standards.
- The certification of our production sites and inspection procedures guarantees the observance and regularity of the quality level.

Protective of all applications in ATEX II2 or II3 areas –surface installations with occasional or rare risks– thanks to ATEX-certified steel, stainless-steel and polyester enclosures.

# Enclosures for explosive atmospheres

## Introduction

PB500411-32

**Personnel safety**  
Blind nut for external earth connection.

PB500407-32

Earthing studs welded to the door and inside the body.

PB502596-32

**Robust**  
The chassis is mounted on four 10-mm shouldered backstuds.

PB500413-32

The 4 fixing holes are blocked by 4 crimped blind nuts.

DB300871

**Label**  
Example of specific ATEX marking (description: page 542).

DB300073-Z7

Delivered in reusable cardboard with assembly instructions enclosed.

## Human-Machine Interface Solutions

Steel

> Indoor non-clean industrial environment

Control enclosure with suspension system

Control Desks

PC racks

Stainless-steel

> Demanding industrial environment

Control Desks

PC racks

PB502000-32

### Spacial S3CM Control enclosure with suspension system

The Spacial S3CM offer for human-machine interface combines **robustness** with **aesthetics** and **ergonomics**. Consist of:

- **control enclosure,**
- **a keyboard-box,**
- **a suspension system** of arms and joints, for a fixed or rotating solutions,
- **and support accessories.**

> See page 406

PB500086-61

### Spacial SD Control desks

The range of Spacial SD control desks provides all the functions required of a workstation intended for industrial and infrastructure applications.

Spacial SD offers two clearly differentiated solutions:

- **the SD Compact control desk,**
- **the SD Control desk with console.**

The range has protection ratings of IP55 and IK10, which guarantee the safety and the protection of the installed devices.

> See page 416

PB502208-16

### Spacial SF suitable PC rack

The Spacial SF PC rack is designed to protect and control computer equipment in an industrial environments.

Access to the various functions and working heights, guaranteeing optimum comfort. The roof and panels, fixed from the inside, prevent access by unauthorised personnel.

> See page 432

PB501287-30

### Spacial SDX Control desks

The Spacial SDX range of control desks offers all the functions required to set up a control station that meets the industrial or infrastructural needs of applications in harsh environments or in the food and beverage sector.

Easy to implement, compatible with dialogue components, guaranteeing the security and protection of control devices, these control desks, with their range of dimensions, meet the strictest needs of their users.

> See page 417

PB501223-55

### Spacial SMX monobloc PC rack

The stainless-steel monobloc PC racks have been especially designed to protect computer equipment installed in corrosive or specially environments that require washing or exposure to sprays of liquid.

Access to the various functions and working heights, guaranteeing optimum comfort.

> See page 436

➤ The **Spacial S3CM offer** for human-machine dialogue consists of:

- control enclosures
- a box-keyboard
- a system of arms and joints fixed or rotating
- accessories.

The global dialogue system combines robustness with aesthetics and ergonomics.

## Human-Machine Interface Solutions

PB500433-33

### Robust

- 2 tube sizes in extruded steel, 50 and 80 mm square, thickness 40/10<sup>e</sup> mm.
- Top wall reinforced by a plate with a thickness of 30/10<sup>e</sup> mm.

PB500418-29

### Aesthetics

- Extruded aluminium rail frame.
- RAL 7040 paint: frame.
- RAL 7035 paint: enclosure.
- Customisation to your image or the aesthetics of your machine: consult us.

PB500446-37

### Ergonomics

Frame designed for handling the enclosure and facilitating the usage by the operator.

PB500439-21

### Easy

Easy access to the equipment by a rear door, opening to 120°.

- Direct installation of accessories on the enclosure frame rail:
  - vertical document support,
  - keyboard support,
  - laptop computer support.
- A box-keyboard is installed directly on the enclosure.

PB500300

### Flexibility

Rotation through 170°; complete range of joints, fixed or rotating.

**This range can be configured according to your needs**

4 different services available:

Assemble to order

Mounting of standard accessories

Painting

Machining

See page 450 for details or consult our web site [www.schneider-electric.com](http://www.schneider-electric.com)

Every model is suitable for tubes with a square section of:

- 50 mm for medium loads,
- 80 mm for heavy loads

(see selection table on page 414).

### Steps to choose the suspension system (medium or heavy loads)

- 1 - Define the total load of the system\*: a + b + enclosure + installed equipment (Y axis).
- 2 - Define the length of arm L (X axe).
- 3 - Define the configuration:

■ Suspension system **without** intermediate joint.

■ Suspension system **with** intermediate joint.

\* The load (a + b + enclosure + installed equipment) must be less than the maximum load.

### ★ Example

- 1 - Total load (kg) = 80 kg.
- 2 - Length (L) = 1200 mm.
- 3 - Suspension system without intermediate joint.

Recommended system > Medium loads □ 50.

Perforated rails installed on lateral studs.

Rear door with double-bar lock.

Detail of the reinforcement plate.

Fixing of the trim frame by screws.

| Characteristics | Spacial S3CM |
|-----------------|--------------|
|-----------------|--------------|

The control enclosures consist of:

- A steel body equipped with:
  - reinforcement plate: the top wall is reinforced by a plate (3 mm) and pierced with a hole Ø 54 or 87 mm (according to the reference) to allow hanging installation of the enclosure,
  - 4 welded studs on the 2 inner vertical walls, for fixing the rails,
  - 2 rails (with drill holes) for installing equipment,
  - a rear door, opening to 120° and closing with double-bar lock.
- An aluminium front face (2.5 mm thick):
  - this surface is protected on both sides by a plastic film, allowing the installation of the dialogue elements,
  - a trim frame made from 4 extruded-aluminium rails: the frame and the front face are delivered assembled.

Structured finish, epoxy-polyester powder, RAL 7040 grey colour (other colours on demand).

- The design of these rails takes into account the accessory mounting functions (lamp, document support, keyboard support, laptop support, etc.), the ergonomics for handling the enclosure and its overall aesthetics.

| <p>The box is installed on the control enclosures with a width of 600 mm. It then has an angle of 120° with its front face. All the accessories required for installation are delivered with 2 brackets and 1 trim rail, 1 hose for cable entry. The box for the keyboard consists of:</p> <ul style="list-style-type: none"> <li>■ a steel body, structured finish, epoxy-polyester powder, RAL 7035 grey colour, with a screwed cover,</li> <li>■ an aluminium front face (2.5 mm thick) for installing a keyboard,</li> <li>■ a trim frame made from 2 extruded-aluminium rails guaranteeing ergonomic handling of the box and the aesthetics of the unit. The frame and the front face are delivered assembled. Structured finish, epoxy-polyester powder, RAL 7040 grey colour.</li> </ul> |            |                                    |                      |

### Tube

- The tubes are available in:
  - 2 sizes: square of 50 and 80 mm,
  - 4 lengths: 0.5, 1, 1.5 and 2 m.
- **Material:** extruded steel.
- **Finish:** structured finish, powder.
- **Colour:** RAL 7035 grey.
- **Thickness:** 40/10° mm.
- **Weights:**
  - 50 x 80: 6.5 kg/m,
  - 80 x 80: 10.5 kg/m.

|                        | Support foot for direct horizontal or vertical connection. |                     | Device allowing rotation through 170° of a horizontal tube, with a square section of 50 or 80 mm, and its fixing on a vertical surface. Protection by bellows, RAL 7035 grey colour. Possibility of passing cables through the inside of the joint. |                     | Device allowing the fixing and rotation through 295° of tubes, with a square section of 50 or 80 mm, in horizontal position. Without blocking the chosen position. Fixing by 4 screws, not included. |                     | Device allowing the linking and rotation through 170° of 2 horizontal tubes, with a square section of 50 or 80 mm. Protection by bellows, RAL 7035 grey colour. Possibility of passing cables through the inside of the joint. |                     |
| Material               | Moulded steel                                              |                     | Moulded steel                                                                                                                                                                                                                                       |                     | Moulded steel                                                                                                                                                                                        |                     | Moulded steel                                                                                                                                                                                                                  |                     |

|                 | Our system of tubes and joints, fixed or rotating, enables all the solutions to respond to the installation needs of the control enclosures for human-machine dialogue. Device allowing the combination and fixing of a horizontal tube with a vertical tube. | Device allowing the fixing and rotation through 310° of tubes, with a square section of 50 or 80 mm, in vertical position. System for blocking in the chosen position. Fixing through the support surface by 4 screws. | Devices allowing the fixing and rotation through 310° of tubes, with a square section of 50 or 80 mm, in horizontal position. System for blocking in the chosen position. Fixing through the support surface by 4 screws. | This fixing allows the enclosures to be tilted up to 30°. System for blocking in the chosen position. It is installed on enclosures with depths of 200 and 250 mm. The installation on enclosures with a depth of 300 mm requires an adapter plate. |

**Adapter for signalling beacon**

- It is installed on fixed brackets ref. **NSYCMUTC50** and **NSYCMUTC80**.
- **Material:** aluminium.
- **Finish:** structured finish, powder.
- **Colour:** RAL 7040 grey.

**SD**

> The range of **Spacial SD** control desks provides all the functions required of a workstation intended for industrial and infrastructure applications.

### Steel control desks

PB501202-16

#### Accessibility

There are two versions of the Compact control desk:

- Front accessibility: designed for straightforward solutions.
- Front and rear accessibility through a removable panel: enables the installation of two adjoining plates and to work at the rear.

The control desk with console offers full accessibility, since it is fully accessible from the rear thanks to the 3-point closure door it includes.

For Spacial SD, the accessibility which allows quick and easy work is one of its main priorities. For this reason, its design excludes the central upright.

PB501197-32

#### Easy

The console opens easily and safely thanks to the installed pneumatic opening lid stays. Cable entry is optimised because all the models of the range include a cable-gland plate with two adjustable parts.

PB501189-14

#### Convenience

The possibility of connecting the modular control desk to the modular consoles affords multiple combinations. The opening direction of the door can be changed quickly thanks to the included hinges.

PB501194-19

#### Compatibility

Furthermore, the Spacial SD control desk is compatible with most of the accessories of the Spacial SF and SM ranges.

**This range can be configured according to your needs**

4 different services available:

Assemble to order

Mounting of standard accessories

Painting

Machining

See page 450 for details or consult our web site [www.schneider-electric.com](http://www.schneider-electric.com)

### SDX

➤ The association of a monobloc control desk with one or more consoles enables all combinations. Complete accessibility to the inside of the control desk thanks to its design without intermediate crossbars.

### Stainless-steel control desks
