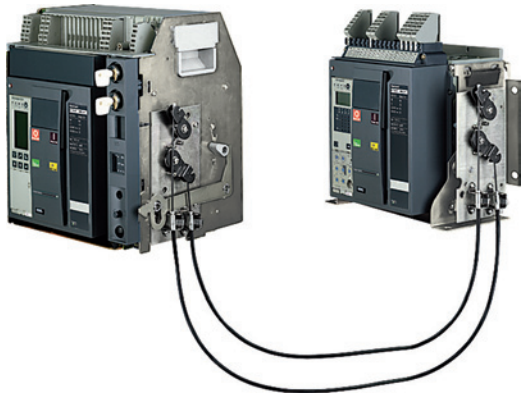
Compact INS/INV, Masterpact



Schneider Electric

• WEB1 cat.2015

A source-changeover system is indispensable:

For critical applications
in particular

For all others
in general

A source-changeover system is indispensable for applications that need a continuous supply of electric power (hospitals, airports, banks, government facilities, etc.).

But a source-changeover system is also suitable for all LV electrical installations exposed to:

> **Nominal voltage loss or dip (when there is high demand for electric power)**

> **Unpredictable power quality**

> **Frequent power cuts.**

These factors, and many others, can damage the continuity of service of your electrical installation.

For infrastructure managers, a source-changeover system gives direct economic benefits: it is possible to select your source based on power cost.
In this case, the replacement source is used as an alternative, more economical source.

Managing energy efficiently

Power Cost

Safety

Where backup supply must be reliable: now that is everywhere.

Electricity is the fuel that feeds economic activity. Very few operations can withstand the financial impact of an electrical stoppage.

For occupant comfort, business continuity, and worker/visitor safety, dependability levels which used to apply to hospitals or airports are now becoming required in shopping malls and offices.

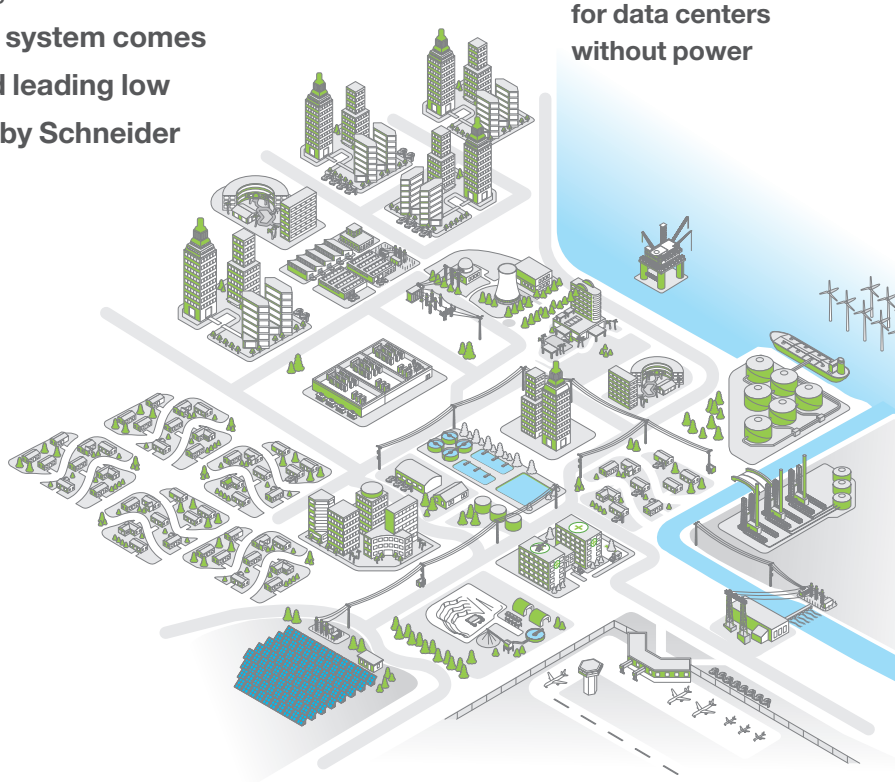
Additionally, utility companies make their contracts more sophisticated to deal with energy concerns: for example, by including time restrictions to total accessible power.

For these reasons, backup power sources expand across all types of buildings, and require high performance connection and management.

Enabling you to meet these challenges, Schneider Electric source-changeover system comes as the natural continuation of the world leading low voltage distribution system developed by Schneider Electric.

> $1M/hr

average loss ratio for data centers without power



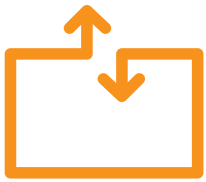
Efficient energy management and continuity of service with source-changeover system

To ensure continuity of service for critical applications, LV electrical installations need to be connected to at least **two independent power sources:**

1. **A normal source (N)**

2. **And a replacement source (R)***
used to supply energy to the installation when the normal source unavailable, or, for instance, when its quality and/or availability is no longer guaranteed.

The source-changeover system switches the load (partly or fully) between these two sources.



A few basics on source-changeover systems

> A source-changeover system **can be automated to manage transfers according to external conditions.**

> Switching from a main power source to a replacement source **can be performed either manually or automatically.**

> A source-changeover system **comprises circuit breakers, switch-disconnectors or contactors.**

** The replacement source (R) can be: a second power source (with possibly different characteristics from the normal source) or an electrical generator*

3 ways to switch the load to meet your needs

1 Manual source-changeover system

(or MTSE: Manual Transfer Switching Equipment)

The simplest way to switch the load. It is controlled manually by an operator. The time required to switch from the 'N' source to 'R' source can vary.

System

2 or 3 mechanically interlocked manually-operated circuit breakers or 2 switch-disconnectors.

Applications

Buildings and infrastructure where the need for continuity of service is significant but not a priority: offices, small and medium-sized businesses.

---

2 Remote-operated source-changeover system

(or RTSE: Remote Transfer Switching Equipment)

The most commonly used system for devices with high ratings. No direct human intervention is required. Source-changeover is controlled electrically.

System

2 or 3 circuit breakers that may have different configurations, linked by an electrical interlocking system. In addition, a mechanical interlocking system protects against electrical malfunctions or incorrect manual operations.

Applications

Industry (assembly lines, engine rooms on ships, critical auxiliaries in thermal powerstations, etc.); **Infrastructure** (port and railway installations, runway lighting systems, control systems on military sites, etc.).

---

3 Automatic source-changeover system

(or ATSE: Automatic Transfer Switching Equipment)

An automatic controller may be added to a remote-operated source-changeover system. It is possible to automatically control source transfer according to programmed (dedicated controllers) or programmable (PLC) operating modes. **These solutions ensure optimum energy management.**

System

2 or 3 circuit breakers that may have different configurations, linked by an electrical interlocking system. A mechanical interlocking system protects against electrical malfunctions or incorrect manual operations, with an automatic control system (dedicated controllers or PLC).

Applications

Commercial and service sector (operating rooms in hospitals, safety systems for buildings, computer rooms for banks and insurance companies, lighting and emergency lighting systems in malls, etc.), **industry and infrastructure.**

Whatever the system, you benefit from our expertise!

> MTSE range

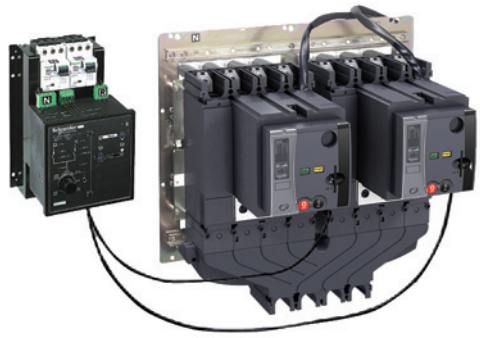
Compact INS
From 40 A to 630 A

> RTSE range

Compact NSX
From 100 A to 630 A

Masterpact NT / NW
From 630 A to 6300 A

> ATSE range



UA Controller **Compact NSX**
From 100 A to 630 A

Our expertise and support come together with the source-changeover system you choose for your LV electrical installation.

With Compact INS, Compact NSX and Masterpact NT and NW, we offer a complete range of solutions, designed around key values:

Maximum continuity of service

> Energy availability is ensured whatever the external requirements (e.g. high power demand).
> Maintenance and replacement of the sources (N or R) can be done with no interruption of service.

You can maintain a continuous level of service and customer satisfaction.

Maximum safety

For LV electrical installations where safety and continuity of service are critical for people and/or equipment such as hospitals, airports, banks, malls, etc.

Optimized energy management

> Transfer the load to a replacement source according to external requirements.
> Manage power sources according to power quality and power costs.
> Perform system regulation.
> Switch to an emergency replacement source.

You are no longer dependent on your power supply (and supplier)!

Simplicity and reliability

> **Simple installation** on LV switchboard.
> **Optimized size** of the switchboard.
> System **based on pre-tested components.**
> Compliance with **IEC 60947-6-1.**

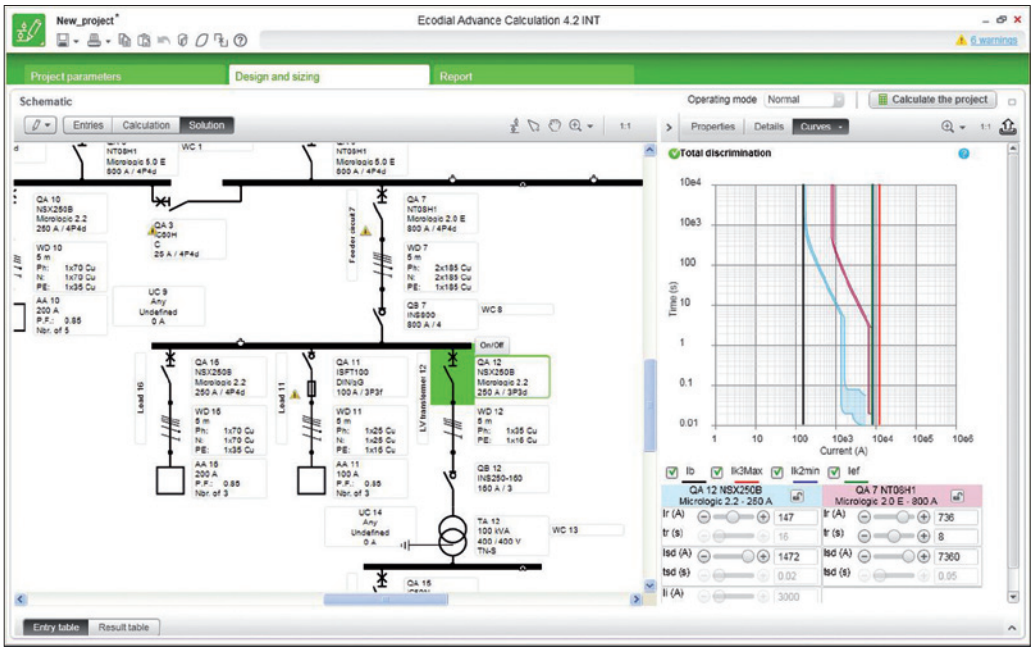
TOOLS

Ecodial

Ecodial software is dedicated to LV electrical installation calculation in accordance with the IEC60364 international standard or national standards.

This 4th generation, "Ecodial Advance Calculation 4", offers a new ergonomic and new features:

- operating mode that allows easy calculation in case of installation with different type of sources (parallel transformers, back-up generators...)
- discrimination analysis associating curves checking and discrimination tables
- direct access to protection settings including residual current protections
- easy selection of alternate solutions or manual selection of a product.



TOOLS

schneider-electric.com

This international site allows you to access all the Schneider Electric Solution and Product information via :

- comprehensive descriptions
- range data sheets
- a download area
- product selectors
- ...

You can also access the information dedicated to your business and get in touch with your Schneider Electric country support.

Informations

IEC60947-6-1 applies to transfer switching equipment (TSE) to be used in power systems for transferring a load supply between a normal and an alternate source (other power supply or generator).

TSE is classified according to

- the method of controlling the transfer
  - manually transfer switching equipment (MTSE)
  - automatic transfer switching equipment (ATSE)
- their short circuit capability
  - Class PC: TSE that is capable of making and withstanding, but not intended for breaking short-circuit currents.
    Switch and switch-disconnectors are the most useful products used.
  - Class CB: TSE that is capable of working, withstanding, it's intended for breaking short-circuit currents and is provided with over-current releases. Circuit breakers (air circuit breaker or moulded-case circuit breaker) are the most useful products used.

Mechanical interlocking

PB113435.eps

Interlocking of two or three toggle-controlled devices.

Interlocking of two or three toggle-controlled devices

Interlocking system

Two devices can be interlocked using this system. Two identical interlocking systems can be used to interlock three devices installed side by side.

Authorised positions:

- one device closed (ON), the others open (OFF)
- all devices open (OFF).

The system is locked using one or two padlocks (shackle diameter 5 to 8 mm).

This system can be expanded to more than three devices.

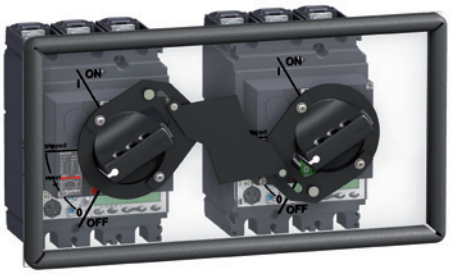
There are two interlocking-system models:

- one for Compact INS/INV
- one for Compact NSX100 to NSX250
- one for Compact NSX400 to NSX630.

Combinations of Normal and Replacement devices

All toggle-controlled fixed or plug-in Compact NSX100 to NSX630 circuit breakers and switch-disconnectors of the same frame size can be interlocked. The devices must be either all fixed or all plug-in versions.

PB113418.eps



Interlocking of two devices by rotary handles.

Interlocking of two devices by rotary handles

Interlocking system

Interlocking involves padlocking the rotary handles on two devices which may be either circuit breakers or switch-disconnectors.

Authorised positions:

- one device closed (ON), the other open (OFF)
- both devices open (OFF).

The system is locked using up to three padlocks (shackle diameter 5 to 8 mm).

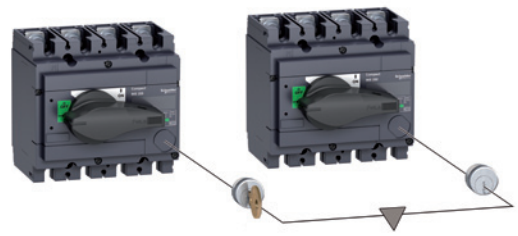
There are two interlocking-system models:

- one for Compact INS/INV
- one for Compact NSX100 to NSX250
- one for Compact NSX400 to NSX630.

Combinations of Normal and Replacement devices

All rotary-handle fixed or plug-in Compact NSX100 to NSX630 circuit breakers and switch-disconnectors of the same frame size can be interlocked. The devices must be either all fixed or all plug-in versions.

PB113829.eps



Interlocking with keylocks.

Interlocking of devices by keylocks (captive keys)

Interlocking using keylocks is very simple and makes it possible to interlock two or more devices that are physically distant or that have very different characteristics, for example medium-voltage and low-voltage devices or a Compact NSX100 to NSX630 switch-disconnector.

Interlocking system

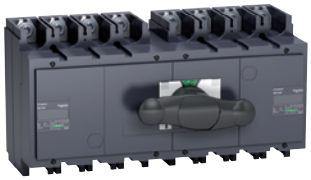
Each device is equipped with an identical keylock and the key is captive on the closed (ON) device. A single key is available for all devices. It is necessary to first open (OFF position) the device with the key before the key can be withdrawwn and used to close another device.

A system of wall-mounted captive key boxes makes a large number of combinations possible between many devices.

Combinations of Normal and Replacement devices

All rotary-handle Compact NSX100 to NSX630 circuit breakers and switch-disconnectors can be interlocked between each other or with any other device equipped with the same type of keylock.

PB111489_43.eps



Source-changeover.

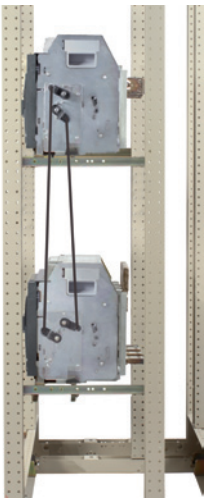
Source-changeover

These assemblies provide an easy way to implement source changeover functions with:

- a single 3-position rotary handle that controls the two switch-disconnectors (Normal source ON, OFF, Replacement source ON)
- a smaller size, taking up less room in the switchboard.

A complete source changeover assembly can be ordered with a single catalogue number.

PB113431.eps



Interlocking of two Masterpact NT or NW circuit breakers using connecting rods.

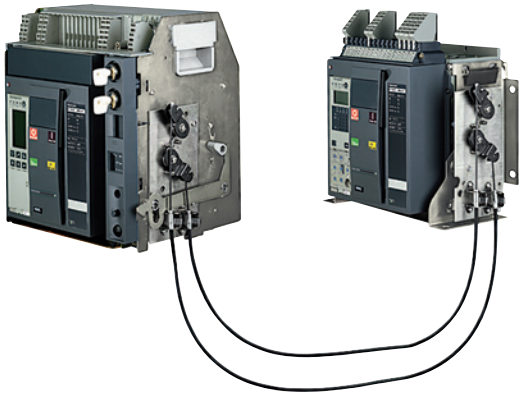
Interlocking of two devices using connecting rods

The two devices must be mounted one above the other (either 2 fixed or 2 withdrawable/drawout devices).
Combinations are possible between Compact NS630b to NS1600 devices, between Masterpact NT and between Masterpact NW devices.
With connecting rods, it is also possible to associate two different types of breakers or switch-disconnectors:
- compact NS with masterpact NT
- compact NS with masterpact NW
- Masterpact NT with Masterpact NW.

Installation
This function requires:
- an adaptation fixture on the right side of each switch-disconnector
- a set of connecting rods with no-slip adjustments
- the use of a mechanical operation counter is mandatory.

The adaptation fixtures, connecting rods, circuit breakers and switch-disconnectors are supplied separately, ready for assembly by the customer.
The maximum vertical distance between the fixing planes is 900 mm.

PB100842_68_SE.eps



Interlocking of two Masterpact circuit breakers using cable.

Interlocking of two or three devices using cables

For cable interlocking, the circuit breakers may be mounted one above the other or side-by-side.
The interlocked devices may be fixed or drawout, three-pole or four-pole, and may have different ratings and sizes.
The following associations are possible:
- 2 compact NS630b to NS1600
- 2 Masterpact NT
- 2 Masterpact NW
- 3 Masterpact NW
- combinations Compact NS with Masterpact NT or Masterpact NW
- combinations Masterpact NT with NW.

Interlocking between two Masterpact NT or NW
This function requires:
- an adaptation fixture on the right side of each device
- a set of cables without slip adjustments
- the use of a mechanical operation counter CDM is mandatory.

The maximum distance between the fixing planes (vertical or horizontal) is 2000 mm.

Interlocking between three Masterpact NW
This function requires:
- a specific adaptation fixture installed on the right side of each device
- two sets of cables without slip adjustments
- the use of a mechanical operation counter CDM is mandatory.

The maximum distance between the fixing planes (vertical or horizontal) is 1000 mm.

Installation
The adaptation fixtures, sets of cables and circuit breakers or switch-disconnectors are supplied separately, ready for assembly by the customer.

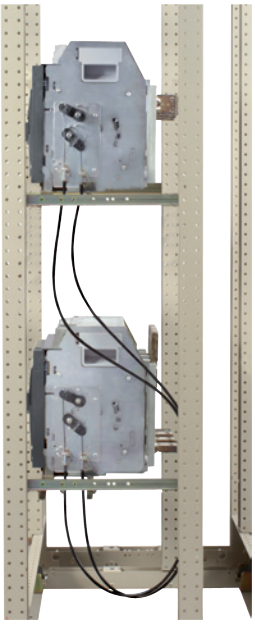
Installation conditions for cable interlocking systems:
- cable length: 2.5 m
- radius of curvature: 100 mm
- maximum number of curves: 3.

Only Masterpact NW may be used for three-device combinations.

Interlocking between two devices (Compact NS630b to 1600 or Masterpact NT, NW
This function requires:
- an adaptation fixture on the right side of each device
- a set of cables with no-slip adjustments.

The maximum distance between the fixing planes (vertical or horizontal) is 2000 mm.

PB113432.eps



Interlocking of two Masterpact circuit breakers using cables.

Electrical interlocking
IVE unit

Electrical interlocking is used with a mechanical interlocking system.

Morover, the relays controlling the closing order to the “N” and “R” circuit breakers must be mechanically and/or electrically interlocked to prevent them from giving simultaneous closing commands.

IVE unit.

Electrical interlocking is carried out by an electrical control device.
For Compact NSX up to 630 A, electrical interlocking is implemented by the IVE unit integrating control circuits and an external terminal block in accordance with the page C-4 of the chapter “Electric diagrams” of this catalogue.
The integrated control circuits implement the time delays required for correct source transfer.
For Compact NS630b to NS1600 and Masterpact, this function can be implemented in one of two ways:
- using the IVE unit
- by an electrician based on the diagrams in accordance with the pages C-8 to C-13 of the chapter “Electric diagrams” of this catalogue.

Characteristics of the IVE unit

- External connection terminal block:
  - inputs: circuit breaker control signals
  - outputs: status of the SDE contacts on the “N” and “R” source circuit breakers.
- 2 connectors for the two “N” and “R” source circuit breakers:
  - inputs:
    - status of the OF contacts on each circuit breaker (ON or OFF)
    - status of the SDE contacts on the “N” and “R” source circuit breakers
  - outputs: power supply for operating mechanisms.
- Control voltage:
  - 24 to 250 V DC
  - 48 to 415 V 50/60 Hz - 440 V 60 Hz.

The IVE unit control voltage must be same as that of the circuit breaker operating mechanisms.

Necessary equipment

For Compact NSX100 to NSX630, each circuit breaker must be equipped with:
- a motor mechanism
- an OF contact
- an SDE contact.

The components are supplied ready for assembly and the circuit breakers prewired. The prewiring must not be modified.

For Compact NS630b to NS1600, each circuit breaker must be equipped with:
- a motor mechanism
- an available OF contact
- a CE connected-position contact (carriage switch) on withdrawable circuit breakers
- an SDE contact.

For Masterpact NT and NW, each circuit breaker must be equipped with:
- a remote-operation system made up of:
  - MCH gear motor
  - MX or MN opening release
  - XF closing release
  - PF “ready to close” contact
- an available OF contact
- one to three CE connected-position contacts (carriage switches) on drawout circuit breakers (depending on the installation).

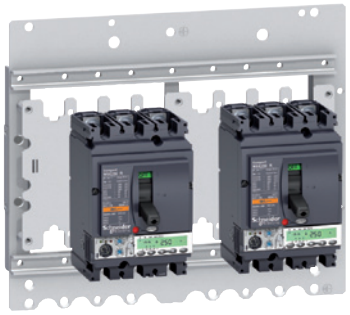
: either ON or OFF.

Note: *following all trips (overload, short-circuit, earth-leakage fault, voluntary trip), a manual reset on the front of the motor mechanism is required.*

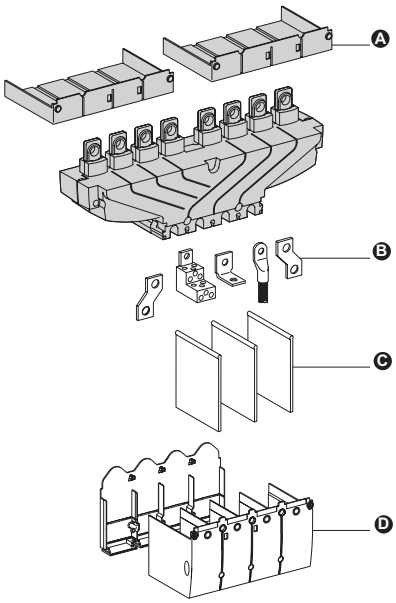
Overview of source-changeover system

PB113417.eps



Interlocking on a base plate.

DB417333.eps



A *Short terminal shields*
B *Terminals*
C *Interphase barriers*
D *Long terminal shields*

Interlocking of two devices by base plate

Interlocking system

A base plate designed for two Compact NSX devices can be installed horizontally or vertically on a mounting rail. Interlocking is carried out on the base plate by a mechanism located behind the devices. In this way, access to the device controls and trip units is not blocked.

Combinations of Normal and Replacement devices

All rotary-handle and toggle-controlled Compact NSX100 to NSX630 circuit breakers and switch-disconnectors can be interlocked. Devices must be either all fixed or all plug-in versions, with or without earth-leakage protection or measurement modules. An adaptation kit is required to interlock:

- two plug-in devices
- a Compact NSX100 to NSX250 with an NSX400 to NSX630.

Connection to the downstream installation can be made easier using a coupling accessory.

Downstream coupling accessory

This accessory simplifies connection to bars and cables with lugs.
It may be used to couple two switch-disconnectors of the same size.
Pitch between outgoing terminals:

- Compact INS250 and INV100 to 250: 35 mm
- Compact INS/INV320 to INS/INV630: 45 mm
- Compact NSX100 to NSX250: 35 mm
- Compact NSX400 to NSX630: 45 mm.

For Compact NSX circuit breakers, the downstream coupling accessory can be used only with **fixed versions**.

Connection and insulation accessories

The coupling accessory can be fitted with the same connection and insulation accessories as the circuit breakers and switch-disconnectors.

Possible uses	Downstream coupling

INS400 to INS630 (320 to 630 A)	■	45

Associated controllers
Controller selection

By combining a remote-operated source-changeover system with an integrated BA or UA automatic controller, it is possible to automatically control source transfer according to user-selected sequences.
These controllers can be used on source-changeover systems comprising 2 circuit breakers.
For source-changeover systems comprising 3 circuit breakers, the automatic control diagram must be prepared by the installer as a complement to to diagrams provided in the “electrical diagrams” section of this catalogue.

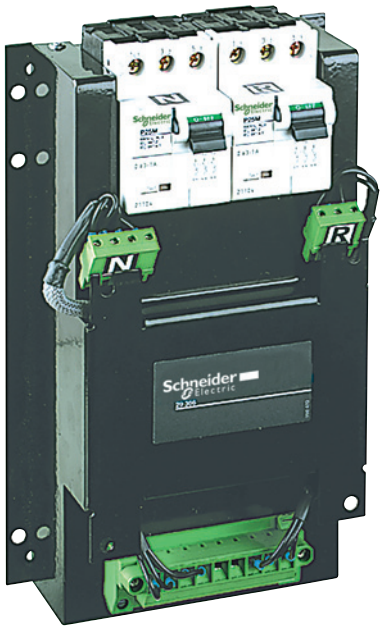
	48 V	8	7	5	5	2	-
	110 V	8	6	4	4	0.6	-
	220/240 V	8	6	4	3	-	-
	250 V	-	-	-	-	0.4	-
	380/415 V	5	-	-	-	-	-
	440 V	4	-	-	-	-	-
	660/690 V	-	-	-	-	-	-

(1) For example, 220 V single-phase or 220 V three-phase.
(2) The controller is powered by the ACP control plate. The same voltage must be used for the ACP plate, the IVE unit and the circuit breaker operating mechanisms. If this voltage is the same as the source voltage, then the “Normal” and “Replacement” sources can be used directly for the power supply. If not, an isolation transformer must be used.

Associated controllers
Controller installation

PB100857_SE.eps



ACP control plate.

ACP control plate

The control plate provides in a single unit:
- protection for the BA or UA controller with two highly limiting P25M circuit breakers (infinite breaking capacity) for power drawn from the AC source
- control of circuit-breaker ON and OFF functions via two relay contactors
- connection of the circuit breakers to the BA or UA controller via a built-in terminal block.

Control voltages
- 110 V 50/60 Hz.
- 220 to 240 V 50/60 Hz.
- 380 to 415 V 50/60 Hz and 440 V 60 Hz.

The same voltage must be used for the ACP control plate, the controller and the circuit breaker operating mechanisms.

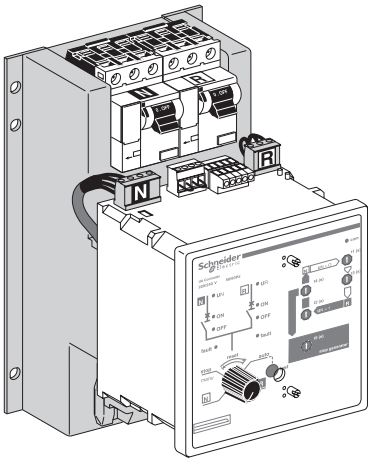
Installation

Connection between the ACP control plate and the IVE unit may use:
- wiring done by the installer
- prefabricated wiring (optional).

Installation of the BA and UA controllers

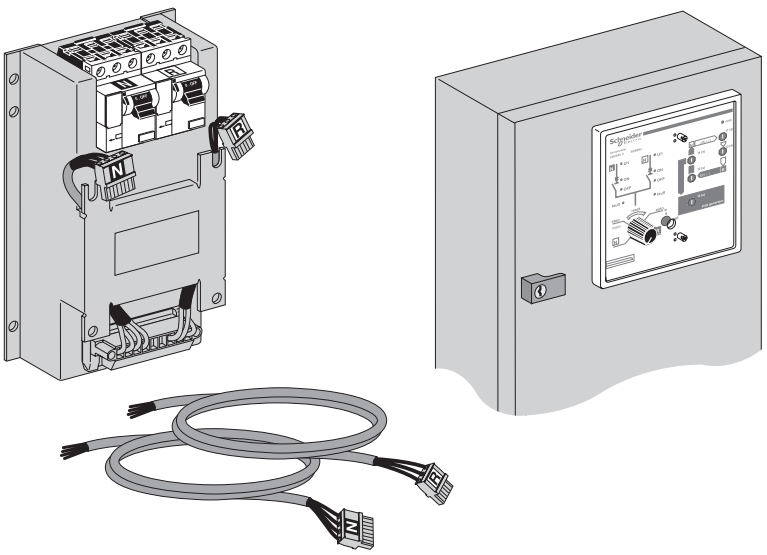
The BA and UA controllers may be installed in one of two manners:
- directly mounted on the ACP control plate
- mounted on the front panel of the switchboard
- if the length of the connection between the controller and the control plate (ACP) is less than or equal to 1 m, the connecting cable **ref. 29368** can be ordered as an optional extra. Cables longer than 1 m, but not longer than 2 m will be the responsibility of the installer.

DB126269.eps



Mounting on the ACP control plate.

DB126270.eps



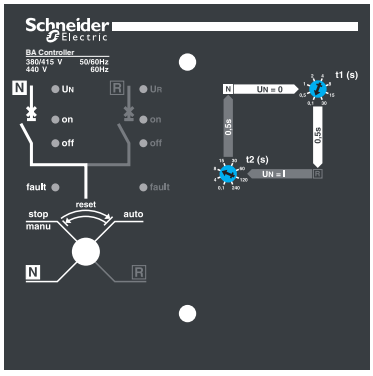
Mounting on the front panel of the switchboard.

BA controller

The BA controller is used to create simple source-changeover systems that switch from one source to another depending on the presence of voltage UN on the “Normal” source.
It is generally used to manage two permanent sources and can control Compact NS, Compact NSX and Masterpact NT/NW circuit breakers and switch-disconnectors.

DB403841.eps

DB400838.eps



Front of the BA controller.

Operating modes

A four-position switch may be used to select:
- automatic operation
- forced operation on the “Normal” source
- forced operation on the “Replacement” source
- stop (both “Normal” and “Replacement” sources off).

Setting the time delays

Time delays are set on the front of the controller.
t1. delay between detection that the “Normal” source has failed and the transmission of the order to open the “Normal” source circuit breaker (adjustable from 0.1 to 30 seconds).
t2. delay between detection that the “Normal” source has returned and the transmission of the order to open the “Replacement” source circuit breaker (adjustable from 0.1 to 240 seconds).

Circuit breaker commands and status indications

The status of the circuit breakers is indicated on the front of the controller.
- ON, OFF, fault.

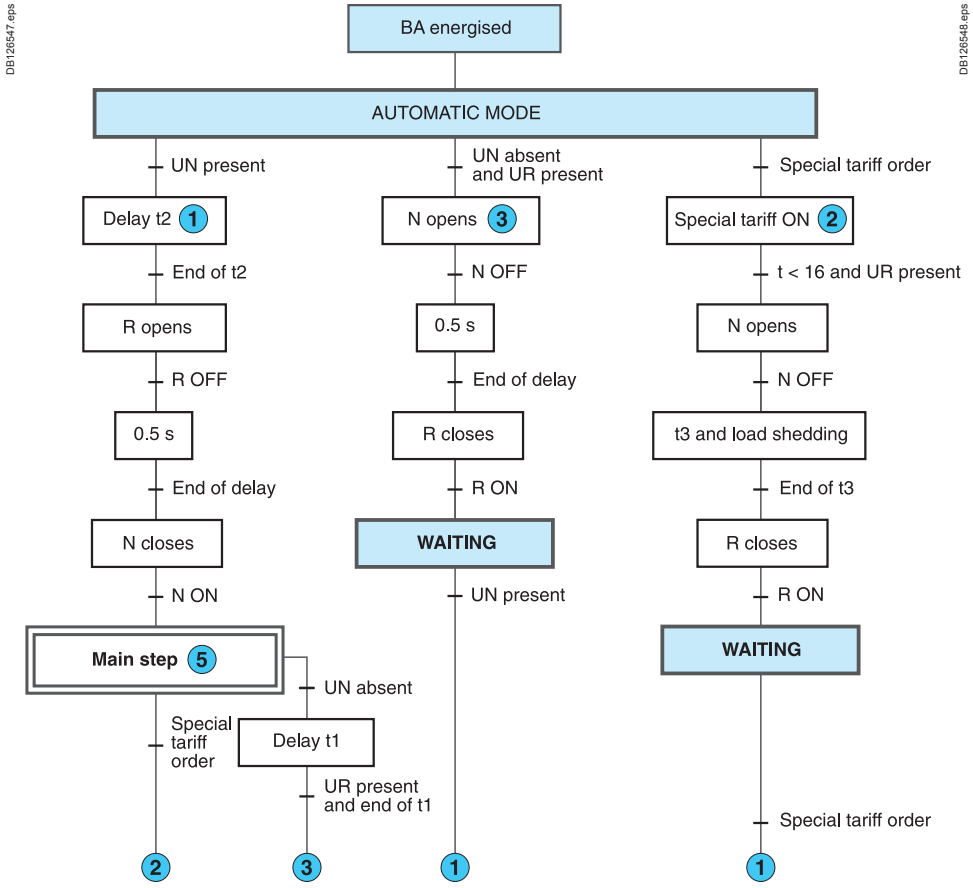
A built-in terminal block may be used to connect the following input/output signals:
- inputs:
  - voluntary order to transfer to source R (e.g. for special tariffs, etc.)
  - additional control contact (not part of the controller). Transfer to the “Replacement” source takes place only if the contact is closed (e.g. used to test the frequency of UR, etc.)
- outputs:
  - indication of operation in automatic or stop mode via changeover contacts.

Test

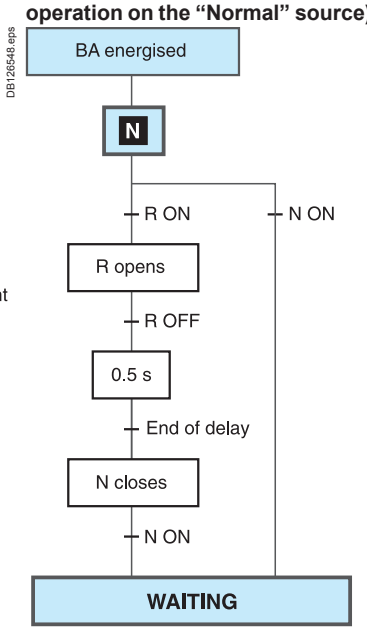
It is possible to test the operation of the BA controller by turning OFF (opening) the P25M circuit breaker for the “Normal” source and thus simulating a failure of voltage UN.

Associated controllers
BA controller
Operating sequences

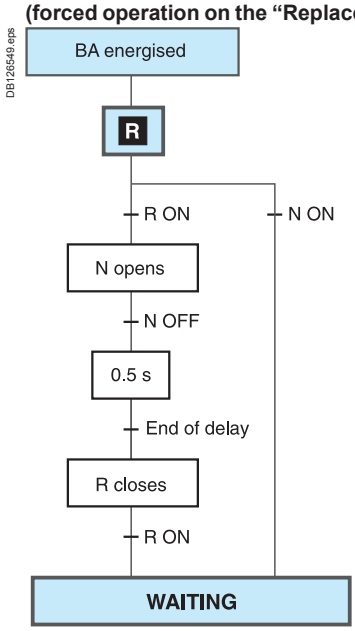
Switch set to Auto (automatic operation and special-tariff mode)



Switch set to the "N" position (forced operation on the "Normal" source)



Switch set to the "R" position (forced operation on the "Replacement" source)



Switch set to the "Stop" position

R : "Replacement" source circuit breaker

1 *The number sends to the indicated step when the condition is true.*

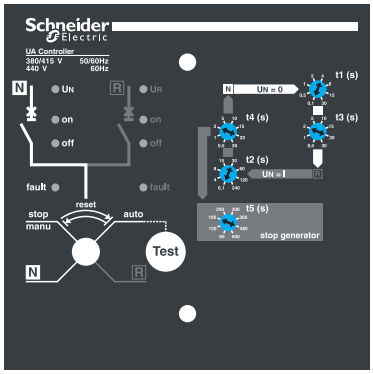
WAITING The system exits this mode when the operating mode is modified or when an external event occurs (e.g. failure or return of UN).

UA controller

The UA controller is used to create a source-changeover system integrating the following automatic functions:
■ transfer from one source to another depending on the presence of voltage UN on the “Normal” source
■ startup of an engine generator set
■ shedding and reconnection of non-priority circuits
■ transfer to the “Replacement” source if one of the phases on the “Normal” source fails.
The UA controller can control Compact NS, Compact NSX and Masterpact NT/NW devices.

DB403842.eps

DB403837.eps



Front of the UA controller.

Operating modes

A four-position switch may be used to select:
■ automatic operation
■ forced operation on the “Normal” source
■ forced operation on the “Replacement” source
■ stop (both “Normal” and “Replacement” sources off, then manual operation).

Setting the time delays

Time delays are set on the front of the controller.
t1. delay between detection that the “Normal” source has failed and the transmission of the order to open the “Normal” source circuit breaker (adjustable from 0.1 to 30 seconds).
t2. delay between detection that the “Normal” source has returned and the transmission of the order to open the “Replacement” source circuit breaker (adjustable from 0.1 to 240 seconds).
t3. delay following opening of QN with load shedding and before closing of QR (adjustable from 0.5 to 30 seconds).
t4. delay following opening of QR with load reconnection and before closing of QN (adjustable from 0.5 to 30 seconds).
t5. delay for confirmation that UN is present before shutting down the engine generator set (adjustable from 60 to 600 seconds).
t6. delay before startup of the engine generator set (120 or 180 seconds).

Commands and indications

Circuit breaker status indications on the front of the controller:
■ ON, OFF, fault.
A built-in terminal block may be used to connect the following input/output signals:
■ inputs:
□ voluntary order to transfer to source R (e.g. for special tariffs, etc.)
□ additional control contact (not part of the controller). Transfer to the “Replacement” source takes place only if the contact is closed (e.g. used to test the frequency of UR, etc.)
■ outputs:
□ control of an engine generator set (ON / OFF)
□ shedding of non-priority circuits
□ indication of operation in automatic mode via changeover contacts.

Distribution-system settings

Three switches are used to:
■ select the type of “Normal” source, whether single-phase or three-phase (e.g. 240 V single-phase or 240 V three-phase)
■ select whether to remain (or not) on the “Normal” source if the “Replacement” source is not operational during operation on special tariffs
■ select the maximum permissible startup time for the engine generator set during operation on special tariffs (120 or 180 seconds).

Test

A pushbutton on the front of the controller may be used to test transfer from the “Normal” source to the “Replacement” source, then the return to the “Normal” source. The test lasts approximately three minutes.

COM communications option

Using the internal bus protocol, this option may be used to remote the following information:
■ circuit breaker status (ON, OFF, fault trip)
■ presence of the “Normal” and “Replacement” voltages
■ presence of an order for forced operation (e.g. special tariffs)
■ settings and configuration information
■ status of non-priority circuits (loads shed or not)
■ position of the switch (stop, auto, forced operation on the “Normal” source, forced operation on the “Replacement” source).

3 devices: 2 sources + 1 coupling				
	**QS1 QC QS2** 0 0 0 1 0 1 1 1 0 0 1 1 1 0 0 (1) 0 0 1 (1) *(1) possible by forcing operation*	■ electrical interlocking: □ without lockout after fault □ with lockout after fault ■ automatic control with lockout after fault	 **51156912** **51156913** **51156914**	 C-25 C-26 C-27

"Lockout after fault" option. This option makes it necessary to manually reset the device following fault tripping.

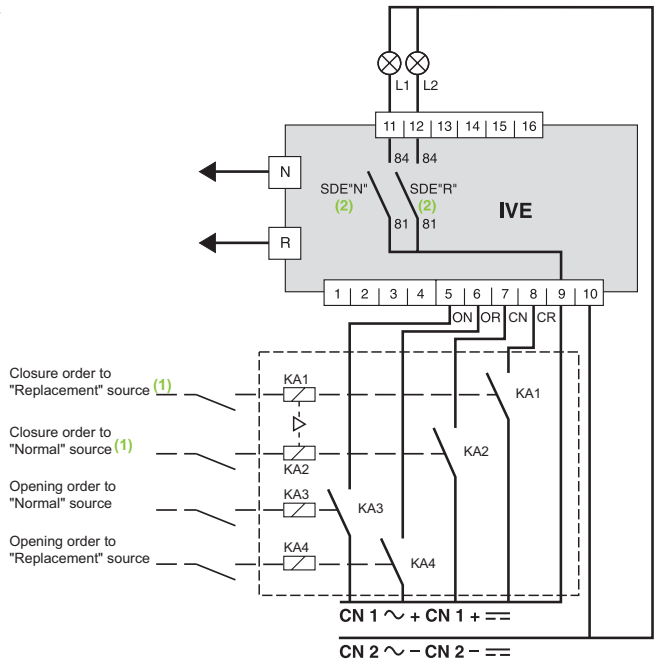
Remote-operated source-changeover systems

2 Compact NSX100/630, NS630b/1600 or Masterpact NT/NW devices

Electrical interlocking by the IVE unit

Independent order to Normal/Replacement source

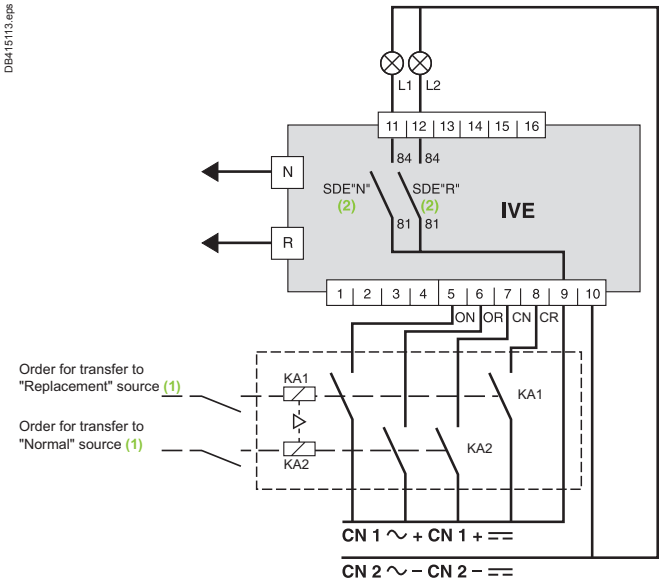
DB415112.eps



Controlling each circuit breaker independently.

Simultaneous order to Normal/Replacement source

DB415113.eps



Control of two circuit breakers by "common" transfer order.

(1) See section "IMPORTANT" here after.
(2) Operating diagram: the SDE "fault-trip" signals are transmitted to the IVE unit. The SDE auxiliary contacts are mounted in the circuit breakers.

IMPORTANT

The relays controlling the closing order to the "Normal" and "Replacement" circuit breakers must be mechanically and/or electrically interlocked to prevent them from giving simultaneous closing commands.

It is recommended to use Tesys K relays from Schneider Electric reference LC2-K06010●●. These relays are mechanically and electrically interlocked.

Remote-operated source-changeover systems

2 Masterpact NT or NW devices

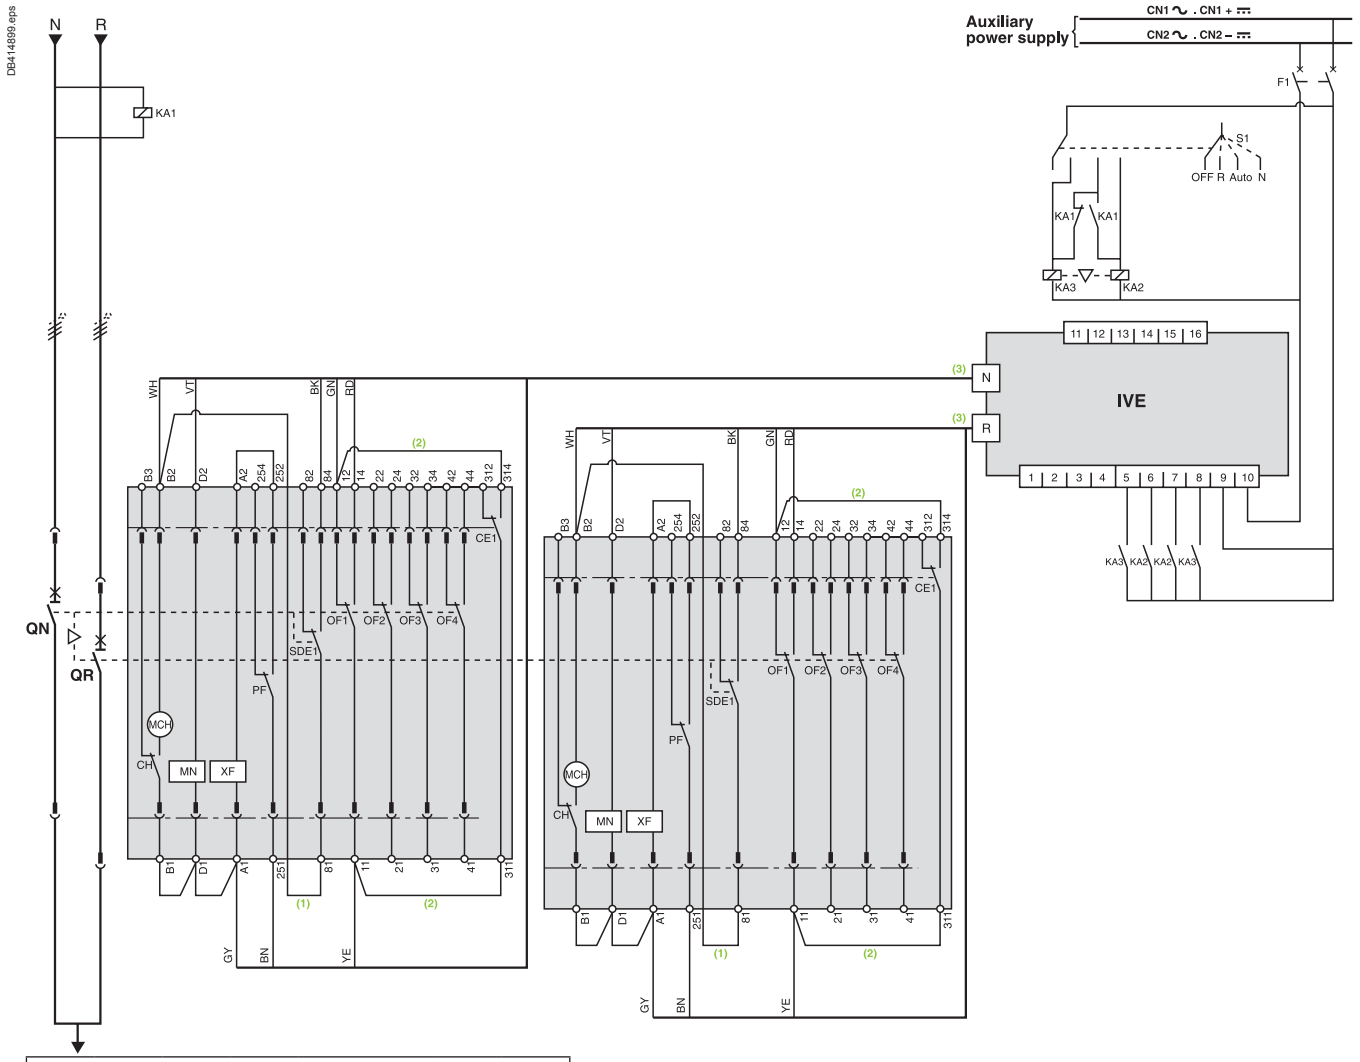
Diagram no. 51156904

Automatic-control system for permanent replacement source with lockout after a fault (with MN)



ATTENTION
The diagram shows the electrical wiring for circuit breakers. When wiring the SDE with **switch-disconnectors, connect wire BK to terminal 82.**

(1) Not to be wired for the "without lockout after a fault" solution.
(2) Not to be wired on fixed version.
(3) Prefabricated wiring supplied.

IMPORTANT

The relays controlling the closing order to the "Normal" and "Replacement" circuit breakers must be mechanically and/or electrically interlocked to prevent them from giving simultaneous closing commands.

It is recommended to use Tesys K relays from Schneider Electric reference LC2-K06010●●. These relays are mechanically and electrically interlocked.

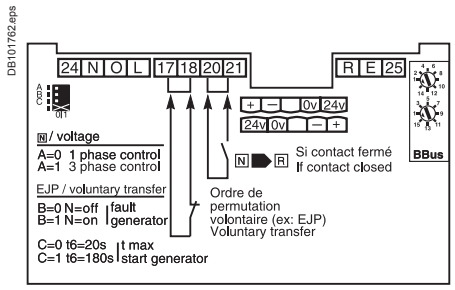
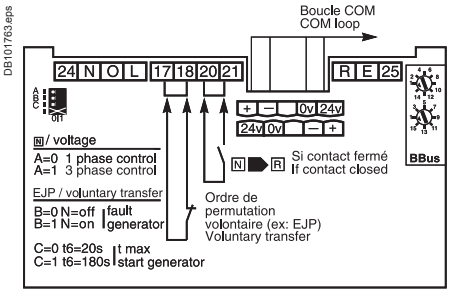
Source changeover system with UA controller

Controller settings



Using communication functions



Tests on “Normal” source voltage
A = 0 single-phase test,
A = 1 three-phase test.

Voluntary transfert (e.g. for energy management)
- action in the event of genset failure

B = 0 circuit breaker N opens,
B = 1 circuit breaker N remains closed.

- maximum permissible genset startup time (T6)

C = 0 T = 120 s,
C = 1 T = 180 s.
After this time has elapsed, the genset is considered to have failed.

The address of the UA 150 controller is set using the two BBus dials.

TOOLS

Ecodial

Ecodial software is dedicated to LV electrical installation calculation in accordance with the IEC60364 international standard or national standards.

This 4th generation, "Ecodial Advance Calculation 4", offers a new ergonomic and new features:

- operating mode that allows easy calculation in case of installation with different type of sources (parallel transformers, back-up generators...)
- discrimination analysis associating curves checking and discrimination tables
- direct access to protection settings including residual current protections
- easy selection of alternate solutions or manual selection of a product.

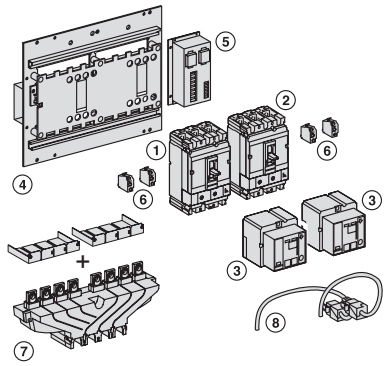
Typical composition of remote controlled source changeover

Remote controlled source changeover

DB413426.eps

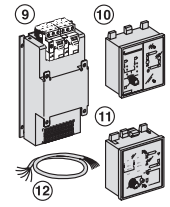


1 normal device N (1)
+ 1 replacement device R (2)
+ 2 remote controls (3)
+ 1 plate with interlocking (4) with IVE (5) and its wiring (8)
+ 2 plug-in kits (if plug-in version)
+ 1 adaptor kit for NSX100...250 plug-in (if NSX400...630 with NSX100...250)
+ auxilary switches (6)
2 x (1 OF + 1 SDE) for Compact NSX100...630
+ 1 downstream coupling accessory (7) for Compact NSX100...630 (option)
+ long RC (if back connection)

IVE voltages and remote controls are identical.

Associated control unit

DB403059.eps



1 source changeover without associated control unit
+ 1 ACP (9) with BA control unit (10)
Or + 1 ACP (9) with UA control unit (11)
Or + 1 ACP (9) with UA150 control unit (11)
+ extension (12) for remote UA/BA connection on front of switchboard

IVE voltages + remote control + ACP + BA or UA are identical.

	Wire length RJ45 L = 3 m	Wire length RJ45 L = 5 m

Source-changeover systems for 2 devices

Compact NS630b to NS1600 / Circuit breakers and switch-disconnectors

To indicate your choices, check the applicable square boxes ☐ and enter the appropriate information in the rectangles ▭.

Diagram for two Compact NS devices

Electrical interlocking with lockout after fault:

Permanent replacement source (with IVE unit)	(no. 51201183)	☐
With emergency off by MX (with IVE unit)	(no. 51201184)	☐
With emergency off by MN (with IVE unit)	(no. 51201185)	☐

Interlocking using connecting rods between two NS630b to NS1600 devices

Manually operated devices installed side-by-side:

	For two fixed NS devices with extended rotary handles	☐

Electrically operated devices installed one above the other:

Select a complete set including two adaptation fixtures and the connecting rods

Complete set for:	2 fixed NS devices	☐
	2 withdrawable NS devices	☐

Interlocking using cables between two NS630b to NS1600 devices

Electrically operated devices installed one above the other or side-by-side:

Select a complete set including two adaptation fixtures and the cables

Complete set for:	2 fixed NS devices	☐
	2 withdrawable NS devices	☐
	1 fixed NS device + 1 withdrawable NS device	☐

Electrical interlocking between two NS630b to NS1600 devices

1 IVE unit 48/415 V - 50/60 Hz and 440 V - 60 Hz	☐
1 wiring kit for connection between 2 fixed / withdrawable devices to the IVE unit	☐

Automatic-control option

Power supply 110 V - 50/60 Hz:	ACP + BA controller	☐
	ACP + UA controller	☐
	ACP + UA150 controller	☐
Power supply 220/240 V - 50/60 Hz:	ACP + BA controller	☐
	ACP + UA controller	☐
	ACP + UA150 controller	☐
Power supply 380/415 V - 50/60 Hz and 440 V - 60 Hz:	ACP + BA controller	☐
	ACP + UA controller	☐
	ACP + UA150 controller	☐

Source-changeover systems for 2 devices

Compact NS630b to NS1600 / Circuit breakers and switch-disconnectors

(One sheet per device, make copies if necessary)

Name of customer:

Customer order no.:

To indicate your choices, check the applicable square boxes and enter the appropriate information in the rectangles

Device identification:

Q 1 - NORMAL SOURCE

Q 2 - REPLACEMENT SOURCE

Circuit breaker or switch disconnector

Compact type	**NS630b to NS1600**	
Rating	**A**	
Circuit breaker	**N, H, L**	
Switch-disconnector	**NA**	
Number of poles	**3 or 4**	
Device	Fixed	
	Withdr. with chassis	
	Withdr. without chassis (moving part only)	
Chassis alone without connections		

Micrologic control unit

Basic protection	**2.0**		**5.0**		**6.0**						
A - ammeter	**2.0**		**5.0**		**6.0**		**7.0**				
E - energy meter	**2.0**		**5.0**		**6.0**						
P - power meter			**5.0**		**6.0**		**7.0**				

AD - external power-supply module V

TCE - external sensor (CT) for neutral protection

Rectangular sensor 280 x 115 mm

TCW - external sensor for SGR protection

LR - long-time rating plug
- Standard 0.4 to 1 Ir
- Low setting 0.4 to 0.8 Ir
- High setting 0.8 to 1 Ir
- LT OFF

Communication

Eco COM module Modbus Device Chassis

Front Display Module (FDM121) Mounting accessory

Breaker ULP cord
- L = 0.35 m
- L = 1.3 m
- L = 3 m

Connections

Horizontal rear connections	Top		Bottom
Vertical rear connections	Top		Bottom
Front connections	Top		Bottom

4x240² bare cable connectors + shields NS - FC fixed

Long connection shields	NS - FC fixed
Vertical-connection adapters	NS - FC fixed, withdr.
Cable-lug adapters	NS - FC fixed, withdr.
Arc chute screen	NS - FC fixed
Interphase barriers	NS - FC fixed, withdr.
Spreaders	NS - FC fixed, withdr.
VO - safety shutters on chassis	NS - FC fixed

Indication contacts

SD trip indication (maximum 1)
- 6 A-240 V AC
- Low level

SDE fault-trip indication (maximum 1) (SDE integrated in electrically operated devices)
- 6 A-240 V AC
- Low level

OF ON/OFF indication contacts (maximum 3)
- 6 A-240 V AC qty
- Low level qty

Carriage switches (possible combinations: 3 CE, 2 CD, 1 CT)

CE - "connected" position	6 A-240 V AC	qty	Low level	qty
CD - "disconnected" position	6 A-240 V AC	qty	Low level	qty
CT - "test" position	6 A-240 V AC	qty	Low level	qty

Auxiliary terminals for chassis alone
- Jumpers (set of 10)
- 3-wire terminal (30 parts)
- 6-wire terminal (10 parts)

Remote operation

Electrical operation: Standard / Communicating

Power supply	AC		DC		**V**
Voltage releases: MX	AC		DC		**V**
MN	AC		DC		**V**

MN delay unit: Adjustable / Non-adjustable

Rotary handles for fixed and withdrawable device

Direct: Black / Red on yellow front / CNOMO conversion access.

Extended: Black / Red on yellow front

Telescopic handle for withdrawable device

Indication auxiliary: 6 A-240 V AC
- 2 early-make switches
- 2 early-break switches

Locking

Toggle (1 to 3 padlocks): Removable system / Fixed system

Rotary handle using a keylock
- OFF position / ON and OFF positions
- Ronis 1351B.500 / Profalux KS5 B24 D4Z
- Keylock kit (without keylock)

For electrically operated devices

VBP - ON/OFF pushbutton locking

OFF position locking:

VCPO - by padlocks

VSPO - by keylocks

Keylock kit (w/o keylock)	Profalux	Ronis
1 keylock	Profalux	Ronis
2 identical keylocks, 1 key	Profalux	Ronis

Chassis locking in "disconnected" position:

VSPD - by keylocks

Keylock kit (w/o keylock)	Profalux	Ronis
	Kirk	Castell
1 keylock	Profalux	Ronis
2 identical keylocks, 1 key	Profalux	Ronis
2 keylocks, different keys	Profalux	Ronis

Optional connected/disconnected/test position locking

VPEC - door interlock: On right-hand side of chassis / On left-hand side of chassis

VPOC - racking interlock

VDC - mismatch protection

Accessories

CDM - mechanical operation counter

CDP - escutcheon

CP - transparent cover for escutcheon

OP - blanking plate for escutcheon

Mounting brackets for fixed NS For mounting on horizontal plane

Test kits: Mini test kit / Portable test kit

Source-changeover systems for 2 devices

Masterpact NT or NW / Circuit breakers and switch-disconnectors

To indicate your choices, check the applicable square boxes ☐ and enter the appropriate information in the rectangles ☐.

Diagram for 2 Masterpact NT/NW devices

Electrical interlocking with lockout after fault:

Permanent replacement source (with IVE unit)	(no. 51201142)	☐
With emergency off by MX (with IVE unit)	(no. 51201143)	☐
With emergency off by MN (with IVE unit)	(no. 51201144)	☐

Automatic control with lockout after fault:

Permanent replacement source (with IVE unit)	(no. 51156904)	☐
Engine generator set (with IVE unit)	(no. 51156905)	☐

Interlocking using connecting rods (NT/NW devices one above the other)

Select a complete set including two adaptation fixtures and the connecting rods

Complete set for:	2 drawout NT devices	☐	2 fixed NT devices	☐
	2 drawout NW devices	☐	2 fixed NW devices	☐
	1 fixed NT device + 1 fixed NW device			☐
	1 drawout NT device + 1 drawout NW device			☐

Interlocking using cables (NT/NW devices one above the other or side-by-side)

Select two adaptation fixtures (one for each device) and a set of two cables

Adaptation fixture for: (NT/NW fixed and drawout devices may be mixed)	1 fixed NT device	qty	☐
	1 drawout NT device	qty	☐
	1 fixed NW device	qty	☐
	1 drawout NW device	qty	☐
	1 set of 2 cables (for two devices)		☐

Electrical interlocking 2 Masterpact NT/NW devices

1 IVE unit 48/415 V - 50/60 Hz and 440 V - 60 Hz	☐
1 wiring kit for connection between 2 fixed / withdrawable devices to the IVE unit	☐

Automatic-control option

Power supply 220/240 V - 50/60 Hz:	ACP + BA controller	☐
	ACP + UA controller	☐
	ACP + UA150 controller	☐

Front Display Module (FDM121)			Mounting accessory		
Breaker ULP cord	L = 0.35 m				
	L = 1.3 m				
	L = 3 m				

Connections

Horizontal	Top		Bottom		
Vertical	Top		Bottom		
Front	Top		Bottom		
Vertical-connection adapters	NT - FC fixed, draw.				
Cable-lug adapters	NT - FC fixed, draw.				
Arc chute screen	NT - FC fixed				
Interphase barriers	NT - NW fixed, draw.				
Spreaders	NT fixed, drawout				
Disconnectable front connection adapter	NW fixed				
Lugs for 240□ or 300□ cables	NW fixed, drawout				
VO - safety shutters on chassis	NT, NW				**X**
VIVC - shutter position indication and locking	NW				

Indication contacts

OF - ON/OFF indication contacts					
Standard	4 OF 6 A-240 V AC (10 A-240 V AC and low-level for NW)				
Additional	1 block of 4 OF for NW	max. 2	qty		
EF - combined "connected/closed" contacts					
	1 EF 6 A-240 V AC for NW	max. 8	qty		
	1 EF low-level for NW	max. 8	qty		
SDE - "fault-trip" indication contact					
Standard	1 SDE 6 A-240 V AC				
Additional	1 SDE 6 A-240 V AC			1 SDE Low level	
Programmable contacts	2 M2C contacts			6 M6C contacts	
Carriage switches	6 A-240 V AC			Low level	
CE - "connected" position	max. 3 for NW / NT		qty		
CD - "disconnected" position	max. 3 for NW, 2 for NT		qty		
CT - "test" position	max. 3 for NW, 1 for NT		qty		
AC - NW actuator for 6 CE - 3 CD - 0 CT additional carriage switches			qty		

Remote operation

Remote ON/OFF	**MCH -** gear motor		**V**		
	XF - closing voltage release		**V**		
	MX - opening voltage release		**V**		
	PF - "ready to close" contact	Low level			
		6 A-240 V AC			
	BPFE - electrical closing pushbutton				
	Res - electrical reset option		**V**		
	RAR - automatic reset option				
Remote tripping	**MN -** undervoltage release		**V**		
	R - delay unit (non-adjustable)				
	Rr - adjustable delay unit				
	2nd MX - shunt release		**V**		

Locking

VBP - ON/OFF pushbutton locking (by transparent cover + padlocks)					
OFF position locking:					
VCPO - by padlocks					
VSPO - by keylocks	Keylock kit (w/o keylock)	Profalux		Ronis	
		Kirk		Castell	
	1 keylock	Profalux		Ronis	
	2 identical keylocks, 1 key	Profalux		Ronis	
	2 keylocks, different keys (NW)	Profalux		Ronis	
Chassis locking in "disconnected" position:					
VSPD - by keylocks	Keylock kit (w/o keylock)	Profalux		Ronis	
		Kirk		Castell	
	1 keylock	Profalux		Ronis	
	2 identical keylocks, 1 key	Profalux		Ronis	
	2 keylocks, different keys	Profalux		Ronis	
	Optional connected/disconnected/test position locking				
VPEC - door interlock		On right-hand side of chassis			
		On left-hand side of chassis			
VPOC - racking interlock					
IPA - cable-type door interlock					
IBPO - racking interlock between crank and OFF pushbutton for NW					
DAE - automatic spring discharge before breaker removal for NW					
VDC - mismatch protection device - chassis					

Accessories

CDM - mechanical operation counter					
CB - auxiliary terminal shield for chassis					
CDP - escutcheon					
CP - transparent cover for escutcheon					
OP - blanking plate for escutcheon					
Brackets for mounting NW fixed				On backplates	
Test kits	Mini test kit			Portable test kit
